

# General purpose sensors in compact plastic housing

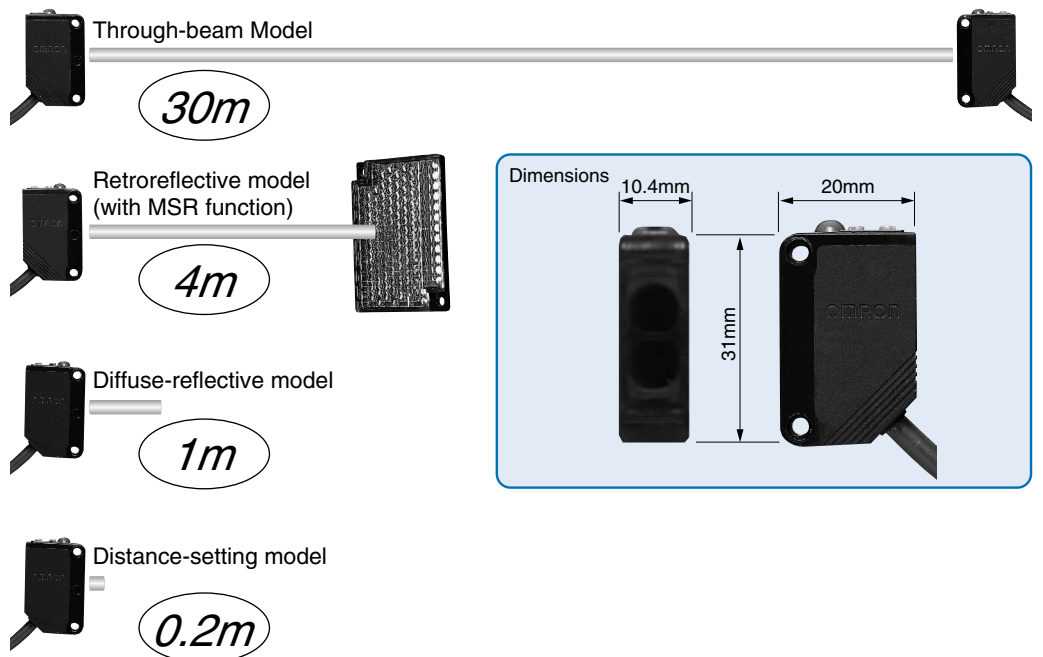

## E3Z

- Compact housing size and high power LED for excellent performance-size ratio
- IP67 and IP69k for highest protection in wet environments

### Features

#### Basic performance

#### Reliability

Eliminates the influence of installation and on-site conditions, thus increasing the reliability of the line.

High protection against water and dust contaminants

High immunity to electrical interference, such as inverter drives.

**Stability**

E3Z-series reliability covers a wide range of object/background combinations, so ensuring stable detection regardless of workpiece color or reflectivity.

**Foreground Suppression & Background Suppression**

**Environmental protection**

Photoelectric Sensor with Built-in Amplifier

E3Z is environmental-friendly, energy-saving.

10-quantity packing reduces waste cartons.

Recycled paper is used.

Standard models provided with a 0.5-m cable are available for the elimination of unnecessary cable length.

Packed in "combustible" polyethylene bags free of Styrofoam. \*

\* If this bag is burned, dioxins hazardous to humans are minimal.

On-going elimination of materials containing lead.

Uses environmentally friendly, lead-free solder.

## Narrow Beam model

Ideal for detecting small objects with a small spot:

- Tiny objects as little as 0.1 mm in diameter can be detected with its 2.5-mm dia. spot.
- The thin beam enables detection through gaps or small holes.
- The high-intensity spot of light enables visual alignment of sensing spot position.

## Transparent PET bottles

Stable detection of recyclable thin-wall PET bottles.

Standard-size transparent object sensor

- Uses OMRON's unique optical system ("Inner View") that can detect various shapes of PET bottles and transparent objects.
- Detects a wide range of bottles regardless of size and facets

## Fork Sensor, single and dual beam versions

Fork design eliminates the need for optical axis adjustment.

- Two-axis models also available.
- Ideal for limit of travel monitoring.
- Condition monitoring.
- „Flag“ identification.

Applications

E3Z-LS background and foreground suppression models

<p>Detecting covers on cosmetic products</p> 	<p>Detecting pastries on conveyor belts</p> 	<p>Detecting packaged chewing gum or candy</p> 
--	---	--

E3Z-L narrow beam models

<p>Checking for straws</p> 	<p>Determining front/back or orientation of floppy disks</p> 	<p>Detecting uneven joints</p> 
---	--	--

E3Z-B transparent object model

<p>Transparent PET Bottle-related Detection - One bottle</p> 	<p>Transparent PET Bottle related Detection - Multiple bottles (Stocker)</p> 	<p>Detection of films and glass plates</p> 
--	--	--

E3Z-G grooved type model

Crane and automated warehouse conveyor table passage inspection and positioning.

## Precautions

### Caution

Do not connect an AC power supply to the Sensor. If AC power (100 VAC or more) is supplied to the Sensor, it may explode or burn.

Be sure to abide by the following precautions for the safe operation of the Sensor.

### Wiring

#### Power Supply Voltage and Output Load Power Supply Voltage

Make sure that the power supply to the Sensor is within the rated voltage range. If a voltage exceeding the rated voltage range is supplied to the Sensor, it may explode or burn.

#### Load Short-circuiting

Do not short-circuit the load, otherwise the Sensor may be damaged.

#### Connection without Load

Do not connect the power supply to the Sensor with no load connected, otherwise the internal elements may explode or burn.

### Operating Environment

Do not use the Sensor in locations with explosive or flammable gas.

### Correct Use

### Design

#### Power Reset Time

The Sensor is ready to operate 100 ms after the Sensor is turned ON. If the load and Sensor are connected to independent power supplies respectively, be sure to turn ON the Sensor before supplying power to the load.

### Wiring

#### Avoiding Malfunctions

If using the Photoelectric Sensor with an inverter or servomotor, always ground the FG (frame ground) and G (ground) terminals, otherwise the Sensor may malfunction.

### Mounting

#### Mounting the Sensor

- If Sensors are mounted face-to-face, make sure that the optical axes are not in opposition to each other. Otherwise, mutual interference may result.
- Always install the Sensor carefully so that the aperture angle range of the Sensor will not cause it to be directly exposed to intensive light, such as sunlight, fluorescent light, or incandescent light.
- Do not strike the Photoelectric Sensor with a hammer or any other tool during the installation of the Sensor, or the Sensor will lose its water-resistive properties.

- Use M3 screws to mount the Sensor.
- When mounting the case, make sure that the tightening torque applied to each screw does not exceed 0.54 Nm.

#### M8 Connector

- Always turn OFF the power supply to the Sensor before connecting or disconnecting the metal connector.
- Hold the connector cover to connect or disconnect it.
- Secure the connector cover by hand. Do not use pliers, otherwise the connector may be damaged.
- If the connector is not connected securely, it may be disconnected by vibration or the proper degree of protection of the Sensor may not be maintained.

#### Distance setting models E3Z-LS

- Make sure that the sensing side of the Sensor is parallel with the surface of the sensing objects. Normally, do not incline the Sensor towards the sensing object.

If the sensing object has a glossy surface, however, incline the Sensor by 5° to 10° as shown in the illustration, provided that the Sensor is not influenced by background objects.

- If there is a mirror-like object below the Sensor, the Sensor may not operate stably. Therefore, incline the Sensor or separate the Sensor from the mirror-like object as shown below.

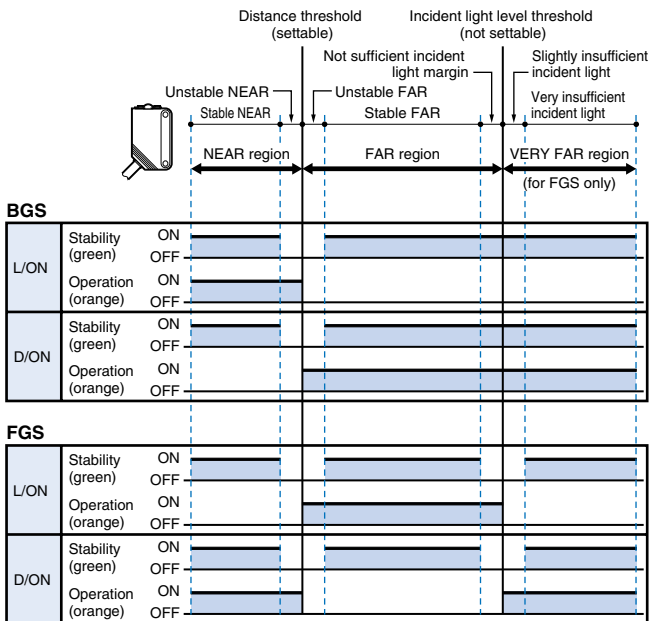

- Do not install the Sensor in the wrong direction. Refer to the following illustration.

Install the Sensor as shown in the following illustration if each sensing object greatly differs in color or material.

### Adjustments-indicator operation

- Note: 1. If the stability indicator is lit, the detection/no detection status is stable within the rated ambient operating temperature (-25 to 55°C).  
 2. The VERY FAR region is supported only for FGS. The incident light threshold is fixed and cannot be set. The distance to the incident light threshold depends on the color and gloss of the sensing object's surface.

#### Design

##### Bottles

The Sensor may be unable to achieve stable detection depending on the shape of bottles. Be sure to verify stable detection before using the Sensor.

#### Mounting

##### Sensor Mounting

If the Sensor fails to provide stable detection due to the shape of bottles, adjust the location and inclination of the Sensor.

#### Inspection and Maintenance

##### Cleaning

Never use paint thinners or other organic solvents to clean the surface of the product.
