

# Compact fans for AC, DC and EC

Version 2019-04

**ebm papst**

the engineer's choice

# Trendsetter in fan technology

*Uncompromising quality made by ebm-papst*

## Among the best.

Trendsetting with innovative technologies. Listening to customers' needs. Developing new ideas to meet requirements and realizing them with pioneering spirit. This philosophy has made ebm-papst the leading technology pioneer in the world of fans.

A brand in that decades of application expertise gained from large-volume fan production and because we are in a position to produce highly efficient quality products. Our intelligent solutions for electronics cooling make sure that you are always one step ahead of the competition thanks to innovative, reliable, top-quality technology. Of course they are readily available at fair market prices.

And if required, tailor-made right down to the last detail. In other words, if you need fans that do not yet actually exist, contact us.

Insist on ebm-papst.

# Table of contents

# About ebm-papst.

*As technological leader for ventilation and drive engineering, ebm-papst is in demand as an engineering partner in many industries. With over 20,000 different products, we provide the right solution for just about any challenge. Our fans and drives are reliable, quiet and energy-efficient.*

## Six reasons that make us the ideal partner:

### **Our systems expertise.**

You want the best solution for every project. The interrelationships between ventilation and drive engineering must thus be considered as a whole. And that's what we do – with **motor technology** that sets standards, sophisticated **electronics** and **aerodynamic designs** – all from a single source and perfectly matched. These system solutions release unique synergies worldwide. And in particular – they relieve you of a lot of work, so that you can concentrate on your core competency.

### **The ebm-papst spirit of invention.**

In addition to our wide range of products, we are always able to develop customized solutions for you. A diversified team of 600 engineers and technicians works at our three locations in Germany: Mulfingen, Landshut and St. Georgen. Contact us to discuss your next project.

### **Our lead in technology.**

As pioneer and trail-blazer for developing highly efficient EC technology, we are way ahead of other motor manufacturers. Almost all our products are also available with GreenTech EC technology. The list of benefits is long: higher efficiency, maintenance-free, longer service life, sound reduction, intelligent control characteristics and unrivalled energy efficiency with savings of up to 80 % compared to conventional AC technology. Let our technology be your competitive advantage as you lead in your industry.

### **Closeness to our customers.**

ebm-papst has 25 production locations worldwide (including facilities in Germany, China and the USA), together with 49 sales offices, each of which has a dense network of sales representatives. You will always have a local contact, someone who speaks your language and knows your market.

### **Our standard of quality.**

Of course you can rely on the highest standards of quality with our products. Our quality management is uncompromising, at every step in every process. This is underscored by our certification according to international standards including DIN EN ISO 9001 and DIN EN ISO 14001.

### **Our sustainable approach.**

Assuming responsibility for the environment, for our employees and for society is an integral part of our corporate philosophy. We develop products with an eye to maximum environmental compatibility, in particular resource-preserving production methods. We promote environmental awareness among our young staff and are actively involved in sports, culture and education. That's what makes us a leading company – and an ideal partner for you.

# The story of our success to market and technology pioneer.

- 1963** Founding of **Elektrobau Mulfingen GmbH & Co. KG** by Gerhard Sturm and Heinz Ziehl.
- 1965** First tubeaxial fan developed in EC/DC technology.
- 1966** ebm-papst's success takes off with the new 68 motor.
- 1972** The first ebm-papst foreign subsidiary is established in Sweden.
- 1988** Gerhard Sturm is awarded the Federal Cross of Merit.
- 1990** The sixty-millionth external-rotor fan is produced.
- 1992** Acquisition of **PAPST Motoren GmbH** in St. Georgen.
- 1997** Buyout of the **Landshut** (mv) plant.
- 1998** Development of first fans with integrated electronics.
- 2003** Change of name to **ebm-papst**.
- 2008** The **HyBlade®** range of fans sets new efficiency standards.
- 2010** **GreenTech** – our sign for energy efficiency and resource preservation.
- 2011** **RadiCal** defines a new standard for EC centrifugal fans.
- 2013** ebm-papst takes over the gearbox specialist Zeitlauf and wins the **German Sustainability Award**.
- 2014** Team partnership with Mercedes AMG PETRONAS Formula 1 team.
- 2015** **RadiPac** pushes the limits of efficiency.
- 2016** **S-Panther** – the consistent development of the S-Forces series.
- 2017** **Factory expansions Germany**: logistics center in Hollenbach and new production unit in St. Georgen.

# Expertise and technology

## Drive know-how

For the past 60 years, all conceivable types and applications of drive engineering have played an essential role at ebm-papst. A commitment that is the foundation for the development of optimum drive solutions regardless of the type of fan and its use. DC and EC fans are generally equipped with electronically commutated external rotor motors. In order to save as much space as possible, commutation electronic components are integrated in the hub of the fan. Our AC fans are driven mainly by shaded-pole or capacitor motors based on the external rotor principle. In the 3900 and 9900 range of particularly slim fans, internal rotor motors are used.

## Smooth operation

Our aerodynamically optimized design and high mechanical precision produces outstanding noise properties in series production. The "soft" commutation electronics of DC and EC fans produce a very smooth operation. By avoiding steep switching edges when the individual coils are switched, this reduces the structure-borne noise from the motor. Computer-aided measurements and series of analyses performed in a state-of-the-art sound measuring chamber are conducted on each fan model from the very beginning.

## Long service life

The bearing system plays a vital role both in the long service life and the smooth operation of device fans. The Sintec compact bearing provides most of the device fans with a proven bearing system. Constant low noise during the entire operating time and considerably lower shock sensitivity are the outstanding features of this bearing technology. In addition, with regard to temperature endurance, Sintec compact bearings can be used without problems in most applications.

Despite the slightly greater noise and shock sensitivity of ball bearings, this bearing technology should be given preference for fans exposed to extreme thermal and adverse application conditions (e.g. extreme environmental conditions, critical installation position, etc.). The service life data provided in this catalog is based on extensive service life tests and mathematically / scientifically proven service life calculations. Our product descriptions are updated continuously with all relevant data obtained from long-term tests.

#### Safety is included

It goes without saying that all ebm-papst fans conform to the approval requirements of the VDE (Association of German Electrical Engineers) and the standards and regulations of UL and CSA. All fans conform to the European Standard EN 60335 or EN 60950 plus those of the UL (Underwriters Laboratories) and CSA (Canadian Standards Association). With few exceptions, our DC fans are designed to meet the requirements of protection class 3 / protection class voltage. AC fans for protection class 1. ebm-papst fans meet the highest requirements of electrical safety. All design variants feature reverse polarity and locked-rotor protection.

#### Quality in detail

It is the important details that reveal the meaning of the words "made by ebm-papst": Consistent adherence to development and design processes and a goal-oriented commitment to quality along the entire process chain are the foundation for the above-average service life of our fans. 100,000 hours and above are no longer an exception. The no-compromise ebm-papst quality assurance spans over all process levels – from the choice of materials and the use of carefully selected, certified suppliers, from the production of parts up to the final assembly. These details combine to result in reliable fan products with an above-average service life.

#### ErP Directive

All products with power consumption between 125 W and 500 kW are subject to the European "Energy-related Products Directive" (ErP) for improving energy efficiency, with the first stage applicable from 2013 and the second as of 2015. Thanks to ground-breaking GreenTech EC technology, all of our fans and motors in these performance classes already exceed the ErP Directive today.

#### Aerodynamics

With the aid of state-of-the-art computer programs, we are able to optimize the fan impellers and the inner shape of the housing. Air output and available motor performance are matched exactly to the size of fan. This guarantees the low noise that is typical for ebm-papst, even at high back pressure.

#### Sturdy construction – in metal or plastic

Fans of all-metal construction: sturdy and resistant. The housing is made of an aluminum alloy. The metal surfaces that are subject to corrosion are permanently protected by an impact- and abrasion-resistant electrophoretic baked enamel. This particular version is very recyclable. Fans with fiberglass-reinforced plastic housing and impeller: Excellent stability and low weight distinguish this highly efficient fan design. Combinations of metal housing and plastic impeller combine the advantages of both types of design.

#### Product images

The dimensioned drawings and product photos that appear in the catalog are for orientation purposes and may differ in some details from the actual product design.

#### Product liability

Motors and fans from ebm-papst are components intended for proper installation. The customer bears responsibility for the overall end product.

#### Brand name PAPST

The PAPST mark is a registered trademark for ebm-papst products and is a synonym for compact fans of the highest quality, functionality and reliability for decades.

# Tailor-made to meet your special requirements

## **Practical applications: fans that are customized and smart**

*ebm-papst has always developed customer-specific smart fans that meet the exact requirements of the application. We provide a wide range of standard fan types, in many sizes and designs; with smart motor features, monitoring and control functions, as well as special designs for use under extreme conditions. They are all based on the standard type fans that you will find in this catalog. Special fan types for your application can be produced in economical batch sizes. Our expert engineers will assist you in selecting the right configuration.*

### **Innovation at its best:**

Vario-Pro® with "intelligence inside". Its programmed intelligence thanks to customer-specifically configured software modules makes the cooling of electronics even more economical and flexible. For example, temperature-dependent speed profiles are possible with a number of freely selectable interpolation points. External speed settings and a variety of combinable alarm and tachometer functions can also be programmed. The digital motor management achieves high control accuracy.

### **Higher degree of protection for every type of application**

ebm-papst provides, on request, many fan series in versions that meet to the requirements of degree of protection IP 54 and IP 68: Their stator and all electrical components are fully encapsulated. Stainless steel ball bearings can be used for operation in particularly aggressive media and use under extreme environmental conditions, thus providing additional reliability.

### **Almost anything is possible**

Regardless of your cooling and ventilation tasks, we will develop the right solution. And the most economical one. Based on the fans listed in this catalog, more than 4000 different versions are available.

### **Temperature-controlled fans**

Fans with temperature-controlled speed have particularly quiet cooling characteristics. Thanks to integrated IC technology, they adapt their speed to the current cooling requirements. The result is a drastic reduction of noise in most operating conditions. A temperature sensor provides the fan with thermal information: either externally via an exposed wire or integrated into the hub of the fan.

### **Speed setting via interfaces**

With a wide range of DC fans with separate control input, ebm-papst provides an alternative to the NTC-controlled types of fans. They are especially suitable for systems and units that already have standard interfaces for varying speed via internal switching and control circuits.

The main applications are units that require load-dependent, individual speed profiles or systems with minimum standby cooling requirements and varied speed increase at varying power peaks.

### **Electronic tachometer**

Do you want to be informed about the current fan speed at all times? ebm-papst has fans with an integrated "electronic tachometer". It registers the actual value of the fan speed. Via an integrated sensor, the fan generates speed-dependent signals that can be used directly. Depending on the number of poles of the motor, 2, 3, or 6 pulses per revolution are generated.

### **Alarm signal for greater safety**

If your application requires monitored fan operation, in addition to speed monitoring, ebm-papst also provides a multitude of varying alarm signals. Depending on the type of fan in question, the signal will either be static, already evaluated, or interface-compatible. The alarm signal output provides reliable long-term monitoring and a status signal if critical operating conditions arise.

### **S-Force**

When you need to provide extremely fast, powerful and efficient cooling for electronic components of all kinds, the generation of S-Force high-performance fans finishes first: in air performance, pressure increase, and technology. Extremely efficient drives and optimized aerodynamics form the core technology of the S-Force fans, which we offer in both an axial and centrifugal model.

### **S-Panther**

S-Panther power delivered quietly. Wherever there is need for power and reduced noise, fans from the S-Panther range are the right solution. A strong pressure saddle curve at optimum air flow provides the power of a real big cat, an S-Panther.

# Optional special versions

(see chapter DC fans - specials)

In the catalog, a text box in the upper right corner provides information on the special designs that are technically possible in the fan series.

Please note that these special versions are not possible for all voltages and speeds, and not in all combinations. The special versions are designed for specific customers and projects and are usually not available off the shelf.

## Speed signal /2, /12

The fan uses a separate wire to output information about its speed, and thus about the speed of the rotor. For technical details, please refer to page 178 and the following.

## Go- / NoGo alarm /37, /39

The fan uses a separate wire to output a static signal when it is stationary, thus providing information about whether or not the rotor is turning. For technical details, please refer to page 182 and the following.

## Alarm with speed limit /17, /19

When one of the speeds defined in the fan electronics is undershot, the fan outputs a static signal providing information that the set speed limit was undershot. For technical details, please refer to page 180 and the following.

## External temperature sensor

An NTC resistor (negative temperature coefficient) is attached to the fan via a separate wire and the fan changes its speed depending on the temperature on the NTC. For technical details, please refer to page 184.

## Internal temperature sensor

In this case, the NTC is integrated into the fan and the fan changes its speed depending on the temperature at the NTC. For technical details, please refer to page 184.

## PWM control input

The speed of the fan can be changed via a pulse-width-modulated signal. This signal is applied to a specially provided wire. For technical details, please refer to page 185.

max. 44 m<sup>3</sup>/h

## DC axial fans

□ 60 x 25 mm

- Material: Housing: GRP<sup>11</sup> (PBT)  
Impeller: GRP<sup>11</sup> (PA)
- Direction of air flow: Exhaust over struts
- Direction of rotation: Clockwise, seen on rotor
- Connection: Via single wires AWG 22, TR 64
- Highlights: Developed for applications with demanding environmental requirements
- Mass: 70 g

- Possible special versions:  
(See chapter DC fans - specials)
- Speed signal
- Go- / NoGo-alarm
- Alarm with limit speed
- External temperature sensor
- PWM control input
- Analog control input
- Humidity protection
- Salt fog protection
- Degree of protection: IP 54 / IP 68

Possible special designs are depicted on the catalog page.

## Analog control input

The speed of the fan can be changed via a control voltage. This control voltage is applied to a specially provided wire. For technical details, please refer to page 185.

## Multi-option control input

The fan has a control input that the user can trigger either using a PWM signal, an analog signal, or a variable resistor. For technical details, please refer to page 186.

## Moisture protection

Protection for the fan electronics against moisture and condensation. For technical details, please refer to page 188.

## Degree of protection IP 54\* / IP 68\*

Protection of motor and circuit board against splashed water and moisture. For technical details, please refer to page 188.

## Salt spray protection

Protection of fan against the damaging effects of salt spray. For technical details, please refer to page 188.

## Direction of rotation

On many variants, the direction of rotation can be changed via a control input.

\* IP = International degree of protection marking  
For AC fans max. IP 65 available.

# Types of fans and their function

## Axial fans:

### **High air flow with medium to relatively high pressure increase**

The air flow in axial fans with an impeller that is similar to a propeller is conducted largely parallel to the axis of rotation, in other words in the axial direction. Axial fans with free air delivery at zero static pressure have the lowest power input that rises with increasing back pressure. Axial fans for cooling of electronic equipment are mostly equipped with external housing. The electric motor is integrated in the fan hub. This compact design allows space-saving accommodation of all devices. The flange is equipped with mounting holes.

## Diagonal fans:

### **High air flow at relatively high pressure increase**

At first glance diagonal fans only differ slightly from axial fans. Intake is axial, whereas exhaust is diagonal. Due to the conical shape of the wheel and housing, the air is pressurized more in the diagonal fan. In direct comparison with axial fans of the same size and comparable performance, these fans are distinguished by the lower operating noise at high pressures.

## Centrifugal fans:

### **High pressure increase at limited flow rate**

Generally, many cooling tasks can be performed excellently by axial and/or diagonal fans. But if the cooling airflow has to be deflected at an angle of 90°, for example, or if even greater pressure increase is necessary, centrifugal fans are more effective. For your application, ebm-papst offers not only complete centrifugal fans, but also motor/impeller combinations without external housing.

## Tangential fans:

### **High air flow with low pressure increase**

Tangential fans are used especially to produce a wide airflow distribution through devices. The air flows through the roller-shaped impellers twice in the radial direction: in the intake area from the outside to the inside and in the outflow area from the inside to the outside. Whirls form in the roller due to the vanes, which guarantee a steady flow of air through the impeller.

# Selecting the correct fan

## 1. Dissipated energy

A large amount of the energy consumed by electrical and electronic devices is converted to heat. So when selecting the correct fan, it is important to determine the dissipated energy that must be removed. The electrical power consumption of the unit to be cooled often represents a suitable value for this purpose.

## 2. Admissible temperature increase

The air flow that the selected fan is required to generate, is determined by the dissipated energy and the admissible heating ( $\Delta T$ ) of the cooling airflow (from entry to exit of the device to be cooled). The maximum admissible  $\Delta T$  depends greatly on the temperature sensitivity of the individual parts of the device.

For example,  $\Delta T = 5\text{ K}$  means that the average cooling airflow leaving the device to be cooled may be only  $5^\circ\text{C}$  warmer than the ambient temperature. This requires a lot of air. A lower air flow rate is sufficient if a higher temperature difference (e.g.  $\Delta T = 20\text{ K}$ ), can be tolerated.

## 3. Required cooling airflow

- In the diagram below, a horizontal line is drawn from the dissipated energy to intersect with the selected  $\Delta T$  line.
- Read down from this point to obtain the required value for the cooling airflow. The diagram is based on the following formula:

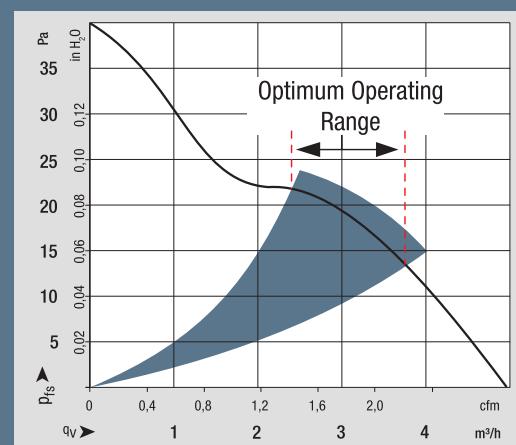

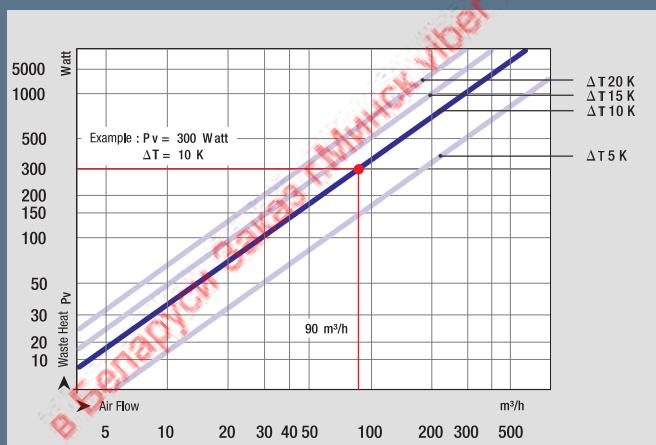

$$q_V = \frac{P_V}{C_{PL} \cdot \rho_L \cdot \Delta T}$$

## 4. Optimum operating range

But the fan you are looking for must also be able to deliver a suitable static pressure increase  $\Delta p_f$ , in order to force the cooling air through the device. So a fan must be selected that provides the required air flow performance within its optimum operating range (see also the air performance curves under technical data).

## 5. Fan selection

If more than one fan meets your requirements, the sound level, space requirements, economy, and ambient conditions will assist in making the final choice.

## Definitions

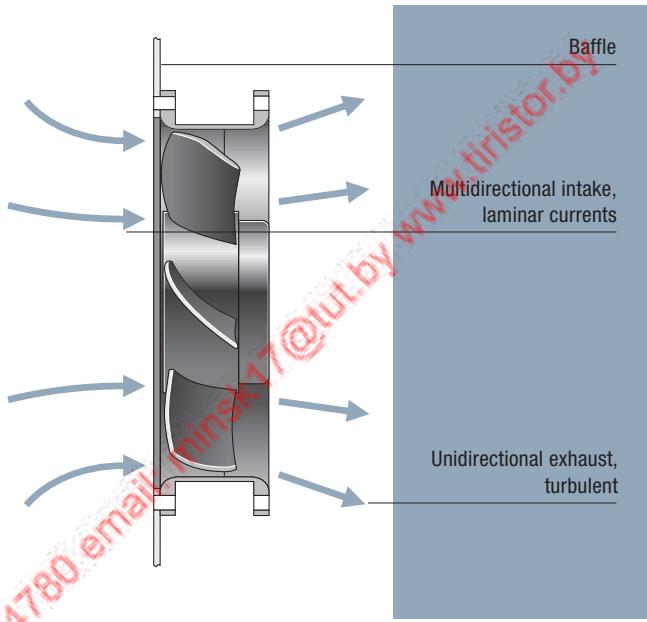

$P_V$  = amount of heat to be dissipated in [W]  
 $C_{PL}$  = specific heat capacity of air in [ $\text{J/kg/K}$ ]  
 $C_{PL} = 1010\text{ J/kg/K}$

$\rho_L$  = air density in [ $\text{kg/m}^3$ ]  
 $\rho_L = 1,2\text{ kg/m}^3$   
 $\Delta T = T_1 - T_2$  temperature difference in [K] between inlet and outlet

# Fan installation

## Intake or exhaust side installation

Under ideal conditions, the operating point is represented as the intersection between the fan and loss curves, regardless of whether the fan is positioned at the air intake or exhaust side of the device. In addition to ensuring the required flow rate, several other aspects must be considered for determining an appropriate fan concept. The intake air currents of a fan are mainly laminar, comprising nearly the entire suction area. By contrast, the exhaust air of a fan is generally turbulent and flows in a preferred direction, such as axial for an axial fan. The turbulence of the exhaust intensifies the heat transfer from components within the air currents, so that installing the fan on the air intake side of the device is recommended for cooling and heating. Installing the fan at the device intake is also advantageous because the fan will not be subjected to the dissipated heat of the device. Therefore, it operates at low ambient temperatures and has a greater life expectancy.

## Information on installation

When a fan is operated for the first time in an application, the user may have noticed that the air flow in the device was lower than expected.

What is the reason for this?

- The values stated in this catalog were determined under optimum, constant, and comparable measurement conditions.
- Ideal installation conditions under which free air intake and exhaust are present are seldom feasible in practice. Quite frequently, the fans have to be installed in close proximity to other components or cabinet panels. As a consequence, the intake and exhaust currents may be restricted, causing the air flow to diminish and the sound level to increase. Fans are particularly sensitive to obstructions that are positioned directly in front of the output cross section, and they often cause an increase in tonal noise.

**Our advice:** The distance between the fan and adjacent components should be at least equal to the installation depth of the fan.

### Accident prevention

The turning rotor and the high speeds that are sometimes involved mean that our fan products carry an inherent risk of injury. They may only be operated after correct installation and with suitable protective equipment (e.g. with a finger guard). More information can be found in the Internet at: [www.ebmpapst.com/safety](http://www.ebmpapst.com/safety)

# Connection instructions for S-Force fans

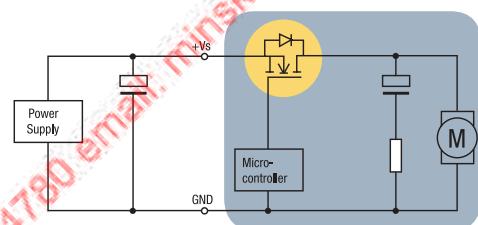

## Special features of S-Force fans

The S-Force series is the most powerful product series. S-Force stands for the highest innovation in motor technology, fluid mechanics and electronics. The one-of-a-kind power density of the products requires special attention to the application at the customer's facility.

## Service life

Due to the high currents in the fans, the load on the electrolyte capacitors is greater, which reduces the service life of the capacitor. As a larger or additional capacitor cannot be housed in the fan, the capacitor must be housed in the supply line.

If the power supply of the application has a corresponding capacitor, in some cases it may be possible to omit the external capacitor.

Recommended measure: additional external capacitor (should be installed as close to the fan as possible < 30 cm).

Fan	Capacitor required
<b>S-Force axial</b>	
8200 / 3200 JH3-JH4	no
4100 NH3 / NH4 / NH5 / NH6	no
4100 NH7 / NH8	yes
5300 / 5300 TD	no
6300 / 6300 TD / DV 6300	no
2200 FTD	no
2200 TD	no
<b>S-Force centrifugal</b>	
RET 97 TD	yes
RER 120 TD	yes
RER 133 TD	no
RER 160 NTDHH	yes
REF 175 TD	no
RER 175 TD	no
RER 190 TD / RG 190 TD	no
RER 220 TD / RG 220 TD	no
RER 225 TDM / RG 225 TDM	no
RER 225 TD / RG 225 TD	no

## Recommended capacitors

We recommend using the following capacitors from Rubycon:

24 VDC:

50 ZL 680  $\mu$ F; 12.5 mm x 30 mm or

50 ZLH 680  $\mu$ F 12.5 mm x 30 mm

48 VDC:

100 YXG 470  $\mu$ F; 16 mm x 35.5 mm or

100 ZLH 470  $\mu$ F 16 mm x 31.5 mm

Other capacitors with equal or greater capacitance and equal or lower serial resistance can also be used.

ebm-papst St. Georgen has the following capacitors in stock:

24 VDC: 1000  $\mu$ F / 50 V, 16 mm x 25 mm

Part number: 992 0354 000 (LZ 354)

48 VDC: 680  $\mu$ F / 100 V, 18 mm x 40 mm

Part number: 992 0355 000 (LZ 355)

# Service life

## Service life data from ebm-papst St. Georgen

Our fans catalog gives three different values for the service life of each product. The first column usually states the service life  $L_{10}$  at 40 °C, the second column usually states the service life  $L_{10}$  at  $T_{max}$ . Exceptions are marked in the column headings. The third column states the new value, life expectancy  $L_{10IPC}$  (40 °C).

Sound power level Bel(A)	■ Watts	rpm	Temperature range °C	Service life $L_{10}$ (40 °C)		Life expectancy $L_{10IPC}$ (40 °C) see page 15	Curve
				Hours	Hours		
5,2	■ 1,8	5 900	-20...+70	85 000 / 42 500	142 500	①	
5,4	■ 1,5	6 300	-20...+70	85 000 / 42 500	142 500	②	

Example of the service life figures on the catalog page.

## Service life $L_{10}$ (40 °C) and $L_{10}$ ( $T_{max}$ )

The values given in the first two columns have been derived from intensive, in-house service life endurance tests in which our products are operated in various positions at 40 °C and 70 °C until they fail. A fan is deemed to have failed when it deviates from its defined air flow and speed values, or when the operating noise becomes noticeable. Such tests can take several years before a representative number of failures has been registered, and even today, some fans are still in the process of endurance testing, even though the test began early in the 1980s. These fans are proof of the legendary "made by ebm-papst" reliability.

Test results are presented in a diagram and the service life of the product  $L_{10}$  at the temperature tested is determined based on the Weibull distribution.

These tests have given us years of experience in the way various design parameters and temperatures can affect the service life of a product. Data for service life at various temperatures for new products can be stated with a very high degree of precision based on tests, product specifications, and commonalities in the design of the product.

## Life expectancy $L_{10IPC}$ (40 °C)

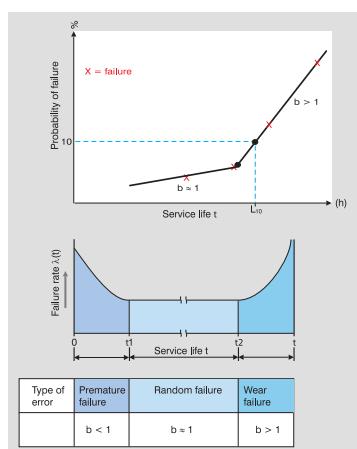

The new third service life column states the life expectancy  $L_{10IPC}$ . This information is based on the international standard IPC 9591. Again here, the foundations for the service life values are our service life endurance tests at high ambient temperatures. The service life at temperatures below the test temperatures is calculated using fixed factors. This method produces much higher service life values, especially at room temperature (see diagram on right).

## Summary:

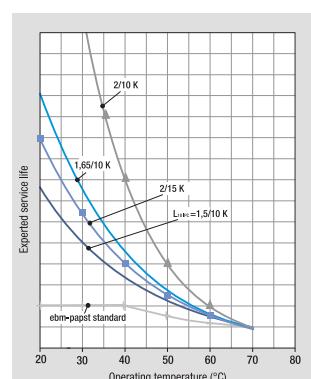

The life span calculations have been carried out to the best of our knowledge and are based on experience gained by ebm-papst. The specified  $L_{10}$  (40 °C),  $L_{10}$  ( $T_{max}$ ) and  $L_{10IPC}$  (40 °C) values all allow statements to be made about the theoretical calculated service life under certain assumptions. The values determined here are extrapolations from our own service life tests and from statistical variables. In the respective customer applications, there may be different influencing factors that cannot be included in the calculations due to their complexity. The service life information is explicitly not a guarantee of service life, but strictly a theoretical quality figure.

Fans in an endurance test cabinet at ebm-papst St. Georgen.  
1500 fans are operated in temperature cabinets until they fail.

Bathtub curve and Weibull distribution.

Example of the influence of factors from various manufacturers on the life expectancy.

# Definitions

## Nominal voltage [volts]

The voltage at which the nominal values (the table values listed in this catalog) were determined. The fan operation for DC fans is not limited to the nominal voltage. Fan speed and fan performance can vary according to the admissible voltage range that is specified on the nameplate of each fan. Please note that this is not a pulsed or modulated DC voltage.

## Frequency [Hz]

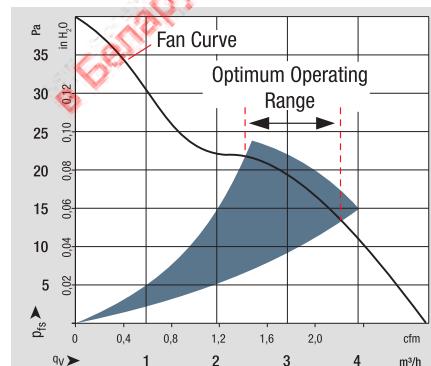

ebm-papst AC fans are made for operating frequencies of 50 Hz or 60 Hz. Their technical data changes accordingly.

## Air flow [ $\text{m}^3/\text{h}$ , cfm]

The air performance of the fan in free air operation, i.e. the fan blows into the free space without static pressure increase.

## Fan curves

The fan curves are determined in accordance with DIN ISO 5801 specifications on a dual-chamber test stand with intake side measurement. This measurement technique closely approximates the operating conditions experienced in typical applications for fans and yields realistic performance curves. The curves apply to an air density of  $\rho = 1.2 \text{ kg/m}^3$  corresponding to an air pressure of 1013 mbar at 20 °C. Variations in air density affect pressure

generation, but not the flow rate. The pressure generated at other air densities can be estimated with the formula  $\Delta p_2 = \Delta p_1 (\rho_2 / \rho_1)$ . The nominal speed values, air flow and power consumption listed in the table were measured in free air operation with horizontal shaft at an ambient temperature of 20 °C - 25 °C, air density  $\rho = 1.2 \text{ kg/m}^3$  after a warmup period of 5 min.

## Optimum operating range

The optimum operating range is always indicated in the colored area in the air performance diagrams. In this range the fans operate best with respect to efficiency and sound level. Within this optimum operating range the sound level only fluctuates slightly.

## Noise [dB(A), Bel(A)]

### 1. Sound pressure level – dB(A)

Noise ratings of the fan in free air operation, i.e. at maximum flow rate.

### 2. Sound power level 1 Bel(A) = 10 dB(A)

Extent of the overall sound radiation of the fan. The sound power level is determined in the optimum operating range.

## PAPST Sintec® sleeve bearings

A particularly economical bearing system with excellent advantages:

- Very precise, large sintered bearings
- Low running noise
- High service life expectancy
- Resistant to shock and vibration

## Ball bearings

Precision ball bearings for particularly high ambient temperatures and high service life expectancy.

## Power consumption [watts]

Input performance of the fan motor when operating free blowing at nominal voltage. Depending on the operating condition in the application, the power consumption may be significantly higher.

## Temperature range [°C]

The admissible ambient temperature range within which the fan can be expected to run continuously.

## Service life [h]

### Service life L<sub>10</sub> at 40 °C and T<sub>max</sub>

Standard figures for service life at ebm-papst. These two temperatures are based on intensive, in-house endurance tests and on experience from more than 70 years developing fans.

### Life expectancy L<sub>10IPC</sub> (40 °C)

Information calculated in line with the standard IPC 9591. Data based on the internal life expectancy at 70 °C, more optimistically extrapolated to 40 °C.

We expressly state that none of the information or data in this catalog is to be construed as a guarantee or warranty of properties.

## Unit conversion

### Air flow

$$1 \text{ cfm} = 1.7 \text{ m}^3/\text{h}$$

$$1 \text{ l/s} = 3.6 \text{ m}^3/\text{h}$$

$$1 \text{ l/min} = 0.06 \text{ m}^3/\text{h}$$

### Pressure

$$1 \text{ Pa} = 1 \times 10^{-5} \text{ bar}$$

$$1 \text{ inch H}_2\text{O} = 249 \text{ Pa}$$

$$1 \text{ mm H}_2\text{O} = 9.81 \text{ Pa}$$

Subject to technical changes.

We do not support aerospace applications with our products. German and international patents (registered designs and utility models).

# Standard test equipment to determine the fan characteristics

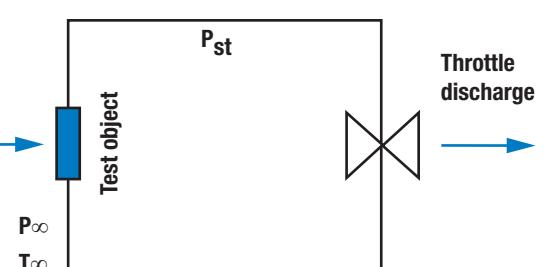

## Pressure/air flow

Blow-down test facility acc. to ISO 5801

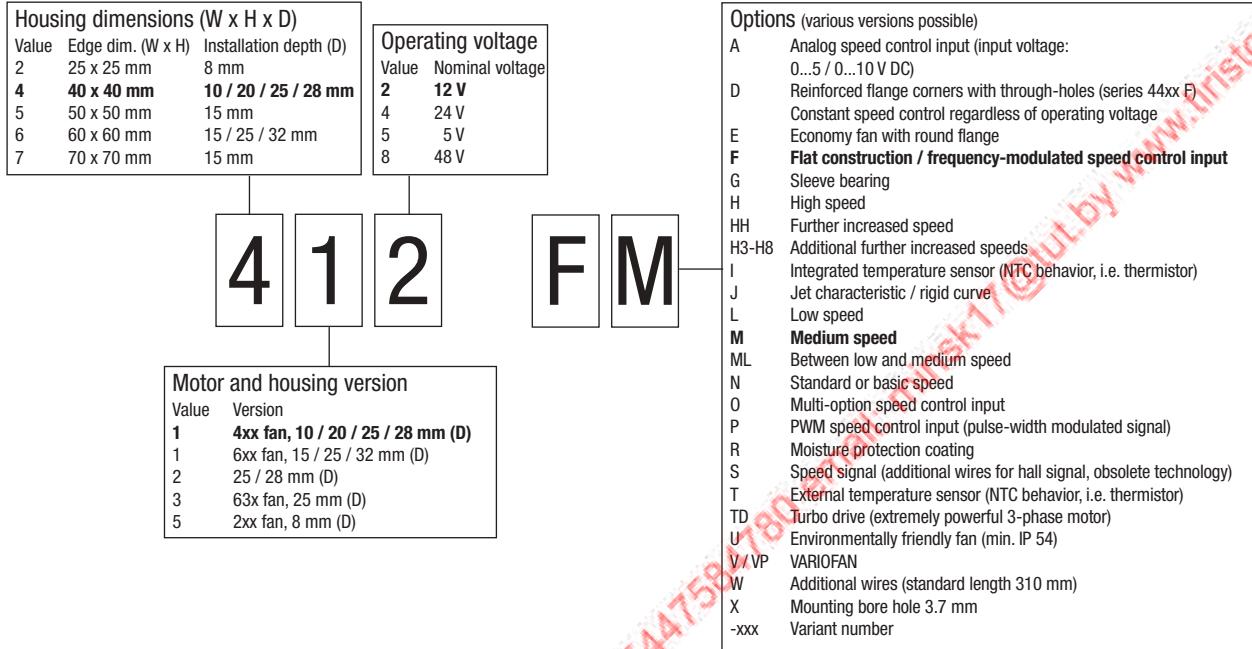

## Sound power level pressure/air flow:

Outlet side regulated test rig in semi-anechoic chamber according to ISO 10302

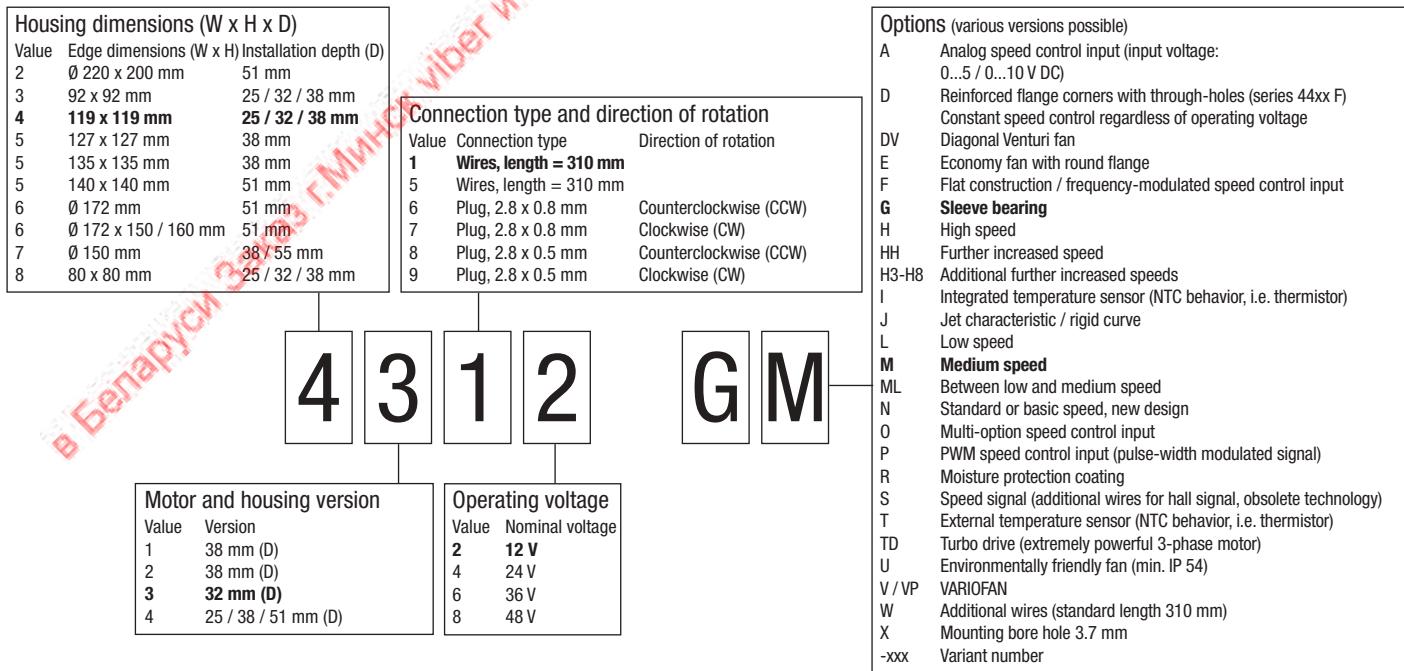

# Type code

## 3-digit DC axial fan e.g. 412 FM

## 4-digit DC axial fan, e.g. 4312 GM

All measurements are given in mm.

# Type code

DC centrifugal fan e.g. RER 160-28/12 N

Type	Housing and fan impeller versions
RE	Housing Impeller blade design None Non-curved, no direction of rotation set
REF	None Forward/backward-curved impeller blades, flat
<b>RER</b>	<b>Backward-curved impeller blades</b>
RET	Forward-curved impeller blades
RG	Square Forward/backward-curved impeller blades
RL	Round Forward-curved impeller blades
RLF	Round Forward/backward-curved impeller blades, flat
RV	Round Forward-curved impeller blades

**R E R**      **1 6 0** - **2 8** / **1 2**      **N**

Impeller diameter in mm

Fan impeller blade height

## Options (various versions possible)

A	Analog speed control input (input voltage: 0..5 / 0...10 V DC)
G	Sleeve bearing
H	High speed
HH	Further increased speed
H3-H8	Additional further increased speeds
I	Integrated temperature sensor (NTC behavior, i.e. thermistor)
L	Low speed
M	Medium speed
ML	Between low and medium speed
<b>N</b>	<b>Standard or basic speed</b>
O	Multi-option speed control input
P	PWM speed control input (pulse-width modulated signal)
R	Moisture protection coating
T	External temperature sensor (NTC behavior, i.e. thermistor)
TD	Turbo drive (extremely powerful 3-phase motor)
U	Environmentally friendly fan (min. IP 54)
-xxx	Variant number

Crossflow blower e.g. QG 030-148/12

Type	Housing and fan impeller versions
Housing	Impeller blade design
<b>QG</b>	<b>Round</b> <b>Compressor drum</b>

## Housing dimensions (W x H)

Value	Edge dim. (W x H)	Impeller length	Total length
148	48 x 50 mm	148 mm	201 mm
198	48 x 50 mm	198 mm	258 mm
303	48 x 50 mm	303 mm	363 mm
353	48 x 50 mm	353 mm	413 mm

**Q G**      **0 3 0** - **1 4 8** / **1 2**

Impeller diameter in mm

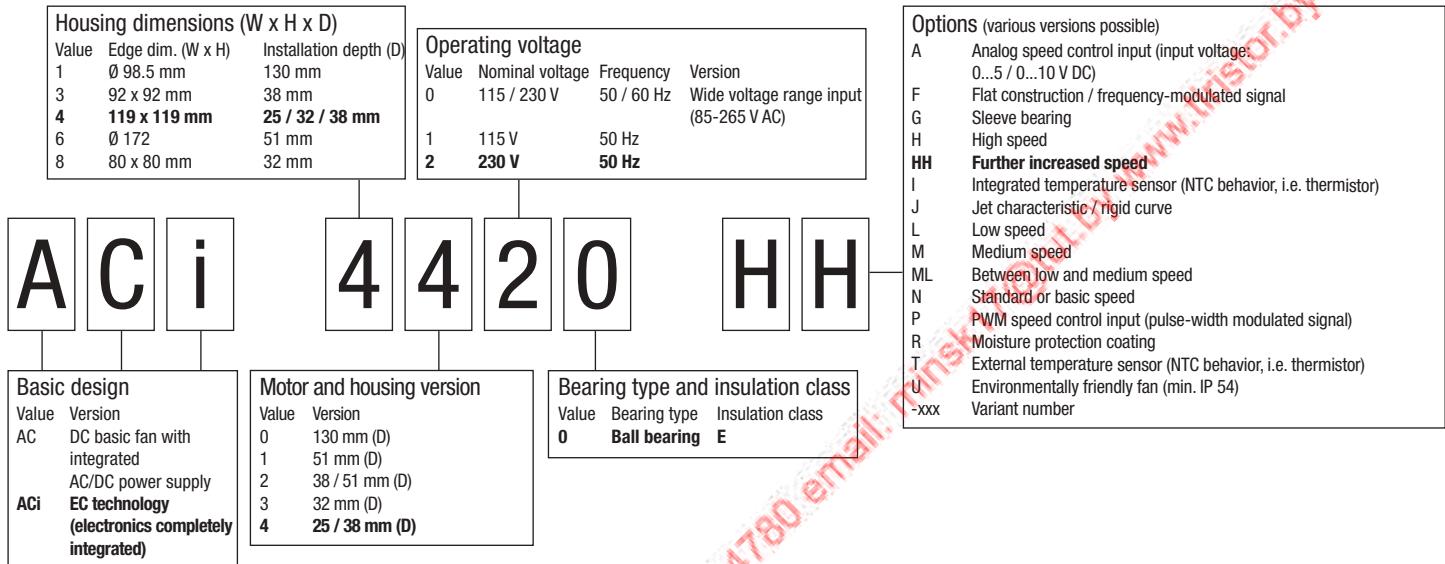

Operating voltage

Value	Nominal voltage
/12	12 V
/14	24 V
/18	48 V

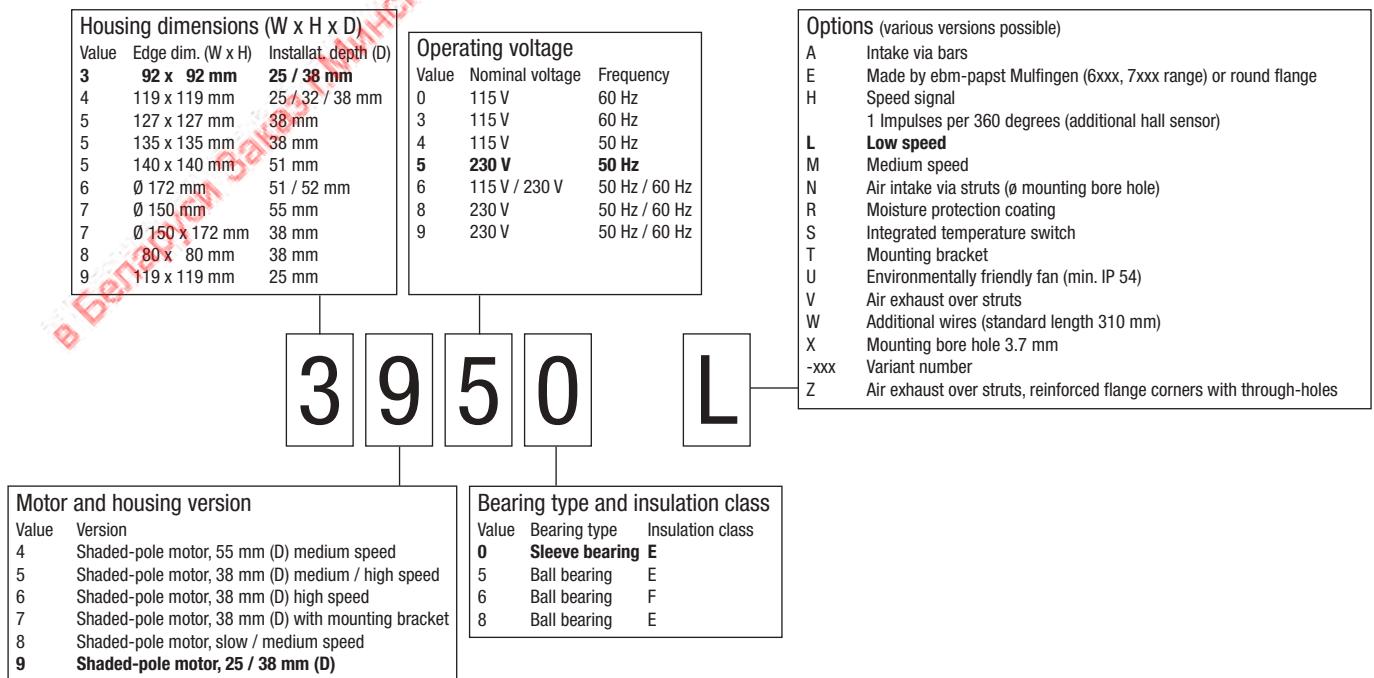

All measurements are given in mm.

# Type code

## 4-digit GreenTech EC tubeaxial fans axial fan e.g. ACi 4420 HH

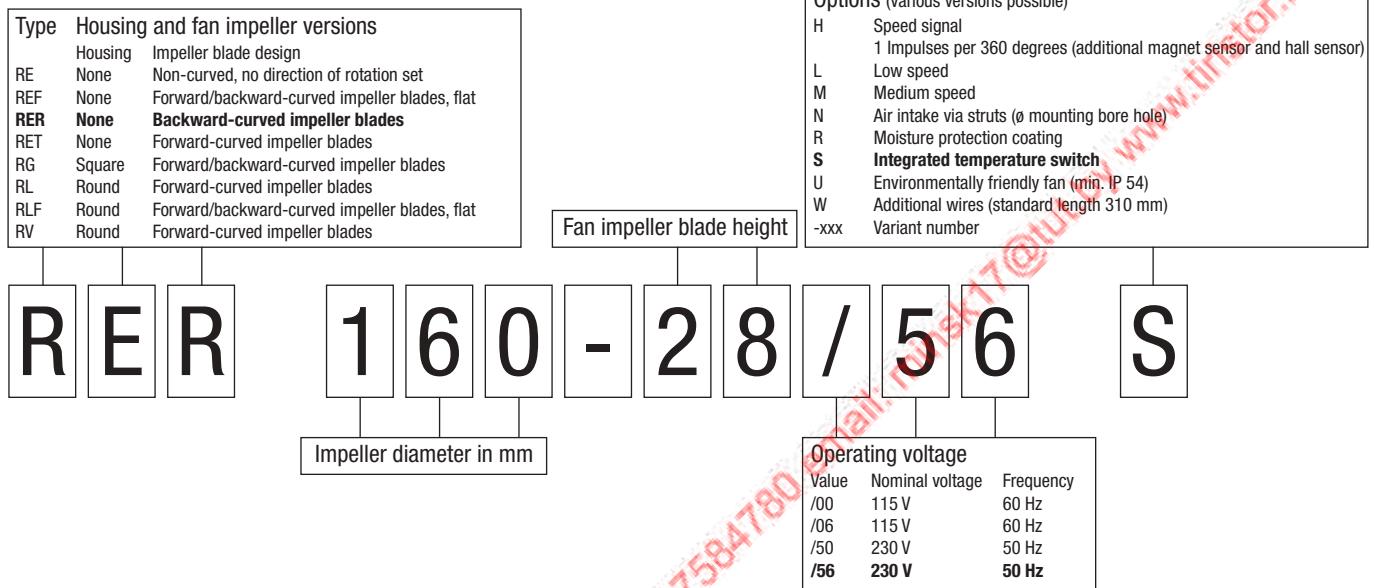

## AC axial fan e.g. 3950 L

All measurements are given in mm.

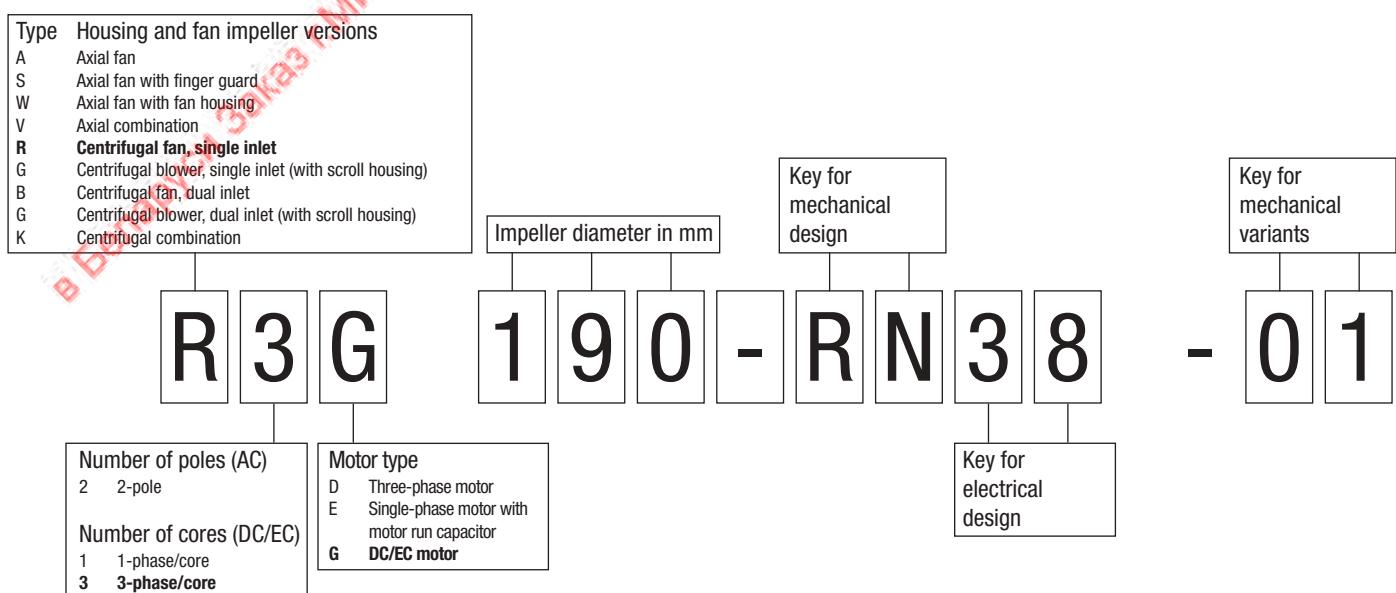

# Type code

AC centrifugal fan e.g. RER 160-28/56 S

DC centrifugal fan e.g. R3G 190-RN 38-01

Note: This type code specifies fans from ebm-papst Mulchingen and can be used to clearly identify and order them:

All measurements are given in mm.

## DC axial fans

DC axial fan overview  
DC axial fan / DC diagonal fan

# DC axial fans

## Technical information

### Product line

ebm-papst offers you the widest full product line of DC axial and diagonal fans from 25 mm to 280 mm in size. Every single type of fan can be optimally integrated in the respective device concept. The highly economical brushless motor technology of these fans provides a unique variety of intelligent innovations at prices that would have been unthinkable a few years ago.

### Electronic protection against reverse polarity

ebm-papst DC fans have electronically commutated drives with electronic protection against reverse polarity. The electronics are integrated in the fan's impeller hub to save space.

### Product life expectancy

A distinctive feature of DC fan technology is the amazing product life expectancy. The outstanding efficiency of the brushless drive results in lower heat stress for the bearings, which significantly increases the service life of the fan.

### Degree of protection

DC fans with sleeve and ball bearings are powered by class E insulated motors. All ebm-papst fans conform to the requirements of degree of protection IP 20. Fans conforming to IP 54 / IP 68 and special degrees of protection are also available.

### Voltage range

Many of our DC fans can be operated on voltages that are up to 50 % lower and 25 % higher than their nominal voltage (see voltage range in the technical tables). This allows the air performance to be adapted to the cooling requirements and the noise to be reduced, even if the fan does not have a control input.

### Closed-loop speed control and monitoring

Closed-loop speed control and function monitoring are becoming increasingly important in many applications. ebm-papst offers many fans in the standard design with a control input and open-collector speed signal.

### S-Force

The S-Force fans with their extremely high blower capacity of up to 1100 m<sup>3</sup>/h and pressure increase of up to 1400 pascals are capable of dealing with the extreme heat load. If needed, these fans can produce up to 100 % more output under full load, and they work with a much broader delivery bandwidth than current models. This makes them ideal for equipment and systems with a high density of components. Thanks to intelligent motor features, they can be adapted individually for any application. S-Force fans are available in standard dimensions. The air flow rate is amazing!

### S-Panther

S-Panther power delivered quietly. Wherever there is need for power and reduced noise, fans from the S-Panther range are the right solution. A strong pressure saddle curve at optimum air flow provides the power of a real big cat, an S-Panther.

Air performance measured according to: ISO 5801.  
Installation category A, without contact protection.  
Noise: Total sound power level L<sub>WA</sub> ISO 10302  
measured on a hemisphere with a radius of 2 m.  
Sound pressure level L<sub>pA</sub> measured at 1 m distance from  
fan axis.  
The values given are applicable only under the specified  
measuring conditions and may differ depending on the  
installation conditions.  
In the event of deviation from the standard configuration,  
the parameters must be checked after installation!  
For detailed information see

## DC axial fans

□ 80 x 32 mm

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Counterclockwise, looking towards rotor
- **Connection:** Via single wires AWG 26, TR 64
- **Weight:** 160 g

- **Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - Go / NoGo alarm
  - Alarm with speed limit
  - External temperature sensor
  - Internal temperature sensor
  - PWM control input
  - Analog control input
  - Moisture protection
  - Salt spray protection
  - Degree of protection: IP 54 / IP 68

1) Fiberglass-reinforced plastic

Air performance measured according to: ISO 5801.  
Installation category A, without contact protection.  
Noise: Total sound power level L<sub>WA</sub> ISO 10302  
measured on a hemisphere with a radius of 2 m.  
Sound pressure level L<sub>pA</sub> measured at 1 m distance  
from fan axis.  
The values given are applicable only under the specified  
measuring conditions and may differ depending on the  
installation conditions.  
In the event of deviation from the standard configuration,  
the parameters must be checked after installation!  
For detailed information see  
<http://www.ebmpapst.com/general-conditions>

Max. 222 m<sup>3</sup>/h

Subject to change

8200 JH3 and JH4 also available as standard with PWM control input and speed signal.  
Speed control range from 2000 rpm<sup>-1</sup> up to maximum nominal speed. Standstill at 0% PWM, maximum speed if control cable is interrupted.

\* Power consumption at free air flow. These values can be significantly higher in the operating point.

## DC axial fans

119 x 38 mm

- **Material:** Housing: GRP<sup>1)</sup> (PBT)  
Impeller: GRP<sup>1)</sup> (PA)
  - **Direction of air flow:** Exhaust over struts
  - **Direction of rotation:** Clockwise,  
looking towards rotor
  - **Connection:** Via single wires AWG 24,  
TR 64
  - **Weight:** 270 g

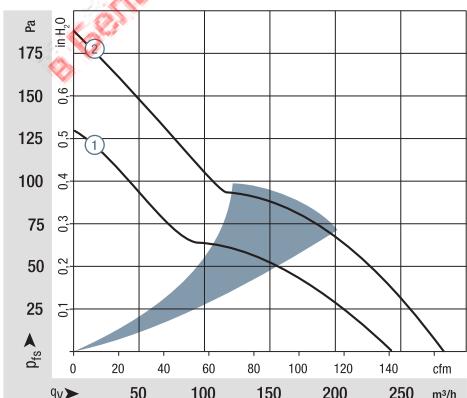

- Possible special versions:  
(See chapter DC fans - specials)
    - Speed signal
    - Go / NoGo alarm
    - Alarm with speed limit
    - External temperature sensor
    - Internal temperature sensor
    - PWM control input
    - Analog control input
    - Moisture protection
    - Degree of protection: IP 54

- **Material:** Housing: Die-cast aluminum  
Impeller: GRP<sup>1)</sup> (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Counterclockwise,  
looking towards rotor
- **Connection:** AWG 18, 20, UL 1007, TR 64;  
speed signal and control input:  
AWG 22, UL 1007, TR 64
- **Highlights:** Highly efficient and smoothly  
operating 3-phase fan drive  
Housing with grounding lug for  
screw M4 x 8 (Torx)  
890 g
- **Weight:** 1) Fiberglass-reinforced plastic

- **Possible special versions:**  
(See chapter DC fans - specials)
  - Speed signal
  - Go / NoGo alarm
  - Alarm with speed limit
  - External temperature sensor
  - Internal temperature sensor
  - PWM control input (standard)
  - Analog control input
  - Multi-option control input
  - Moisture protection
  - Salt spray protection
  - Degree of protection: IP 54

Max. 545 m<sup>3</sup>/h

Subject to change

Speed control range from 700 rpm<sup>-1</sup> up to maximum nominal speed. Standstill at 0 % PWM, maximum speed if control cable is interrupted.

\* Power consumption at free air flow. These values can be significantly higher in the operating point.

Air performance measured according to: ISO 5801.  
Installation category A, without contact protection.  
Noise: Total sound power level L<sub>WA</sub> ISO 10302  
measured on a hemisphere with a radius of 2 m.  
Sound pressure level L<sub>PA</sub> measured at 1 m distance  
from fan axis.  
The values given are applicable only under the specified measuring conditions and may differ depending on the installation conditions.  
In the event of deviation from the standard configuration, the parameters must be checked after installation!  
For detailed information see

Speed control range from 1000 rpm<sup>-1</sup> up to maximum nominal speed. Standstill at 0 % PWM, maximum speed if control cable is interrupted.

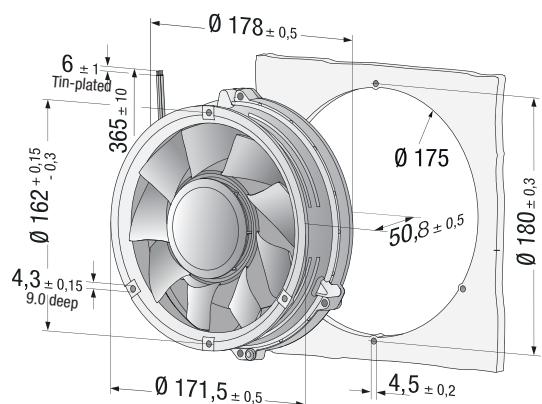

The fan has an acceleration of up to 30% that produces a smoother curve.

Air performance measured according to: ISO 5801.  
Installation category A, without contact protection.  
Noise: Total sound power level L<sub>WA</sub> ISO 10302  
measured on a hemisphere with a radius of 2 m.  
Sound pressure level L<sub>PA</sub> measured at 1 m distance  
from fan axis.

The values given are applicable only under the specified  
measuring conditions and may differ depending on the  
installation conditions.

In the event of deviation from the standard configuration,  
the parameters must be checked after installation!
