

DC fans - specials

Technical information

Cooling capacity and efficiency

Greater power density, increasing miniaturization and extreme electronic component density are placing increased demands on the cooling capacity and efficiency of fans. Therefore, intelligent and space-saving integration of the fan in the device configuration is very important:

- Tailor-made cooling adapted to the situation as and when required.
- Programmable cooling by defining speed profiles.
- Transparency of function thanks to complete, interactive monitoring in all operating conditions.

Standard fans in electronics cooling have proven themselves a million times over.

With a constant speed and an appropriate sound level, they continuously provide the air flow required for extreme cases. But these extreme situations occur seldom – if at all – during operation. What is needed is an intelligent fan that adapts automatically to the level of cooling required at the time.

ebm-papst provides intelligent cooling concepts that are optimally adapted to practical requirements. For example:

1. Speed adjustment via temperature sensor

ebm-papst answers with a complete range of DC fans with temperature-controlled speed adjustment via a temperature sensor, available in a variety of standard dimensions.

Installation is very simple. Either an external temperature sensor in the form of an exposed wire that can be placed anywhere, or an internal sensor located directly in the fan hub in the air flow provides continuous and undissipated thermal information to the control electronics for speed adjustment. A range of temperature sensors can be found on page 184.

2. DC fans with separate control input

Open or closed-loop speed control is also possible with DC fans that have a separate control input. So a control voltage or a pulse-width modulated signal can be used to vary the speed. These options are used primarily in devices that have the appropriate standard interfaces and require varied fans depending on the load.

DC fans - specials

3. Speed signal

DC fans with speed signal.

The integrated "electronic tachometer" continuously provides an actual speed signal for external evaluation. A very simple signal evaluation on the customer side informs the user of the current fan speed at all times. The speed signal is provided by a separate wire.

4. Alarm signal

For applications that require monitored fan operation with an alarm signal, ebm-papst offers a number of alarm signals variants. Depending on the type of fan in question, the signal will either be static, already evaluated, or a continuous, interface-compatible, high or low signal. The alarm signal is provided by a separate wire.

5. Turbo drives

Fans with three-phase EC drives and microprocessor-controlled motor electronics. The torque of these three-phase motors, which is virtually independent of the rotor position, allows the fan to run very smoothly. The speed of these fans can be controlled over a very wide speed range by means of PWM, analog voltage, or temperature. Optionally, the fans can be supplied with reversible direction of rotation and active brake operation.

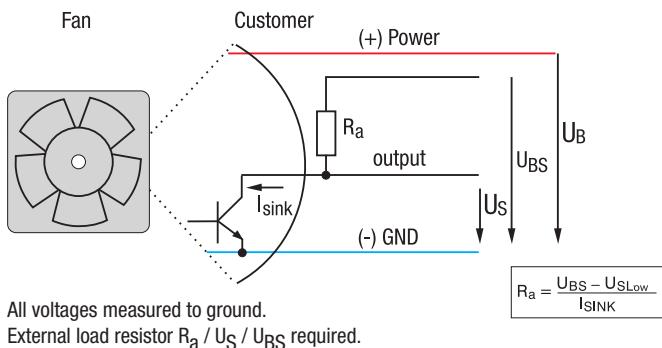

6. Protection against environmental conditions

Some applications place particular demands on the fans' resistance to environmental conditions, such as dust, moisture, water, and salt. ebm-papst offers solutions for adapting fans to these conditions.

Speed signal /2

- Speed-proportional, square-wave signal for external monitoring of the fan motor speed
- 2, 3, or 6 pulses per revolution
- Open-collector signal output
- Extremely wide operating voltage range
- Easy adaptation to user interface
- Connection via separate cable
- The sensor signal also serves as a major comparison variable for setting and maintaining the setpoint speed for interactive or controlled cooling with one or more interconnected fans.

Electrical hookup

Available on request:

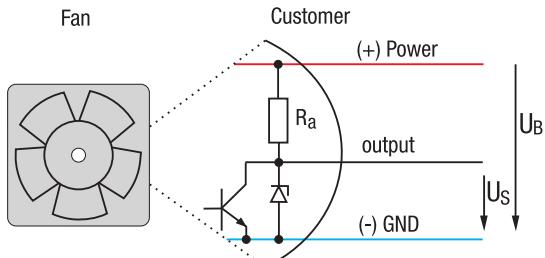

- Electrically isolated speed signal circuit
- Varying voltage potentials for power and logic circuit

Signal data	Speed signal $U_{S\text{ Low}}$	Condition: I_{SINK}	Speed signal $U_{S\text{ High}}$	Condition: I_{source}	Admissible sink current $I_{SINK\text{ max.}}$	Pulses per revolution*
Type	VDC	mA	VDC	VDC	mA	
12 / 24 V	≤ 0.4	2	≤ 30	30	4	2
48 V	≤ 0.4	2	≤ 60	60	4	2
Subject to change						
Standard value, can vary depending on fan series.						
* Depending on the fan electronics other values are feasible e. g. 3 or 6.						

Speed signal /12

- Speed-proportional, square-wave signal for external monitoring of the fan motor speed
- 2, 3, or 6 pulses per revolution
- TTL-compatible
- Integrated pull-up resistor
- Connection via separate cable
- The sensor signal also serves as a major comparison variable for setting and maintaining the setpoint speed for interactive or controlled cooling with one or more interconnected fans.

Electrical hookup

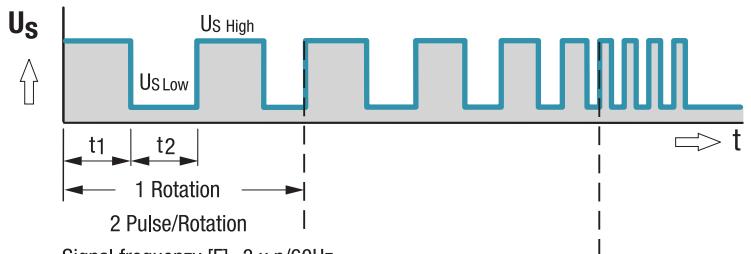

Available on request:

- Electrically isolated speed signal circuit
- Varying voltage potentials for power and logic circuit

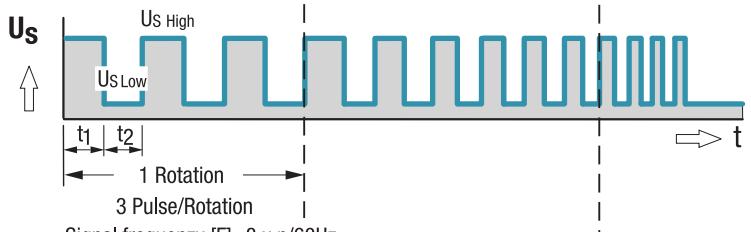

Signal data	Speed signal $U_{S\text{ Low}}$	Condition: I_{SINK}	Speed signal $U_{S\text{ High}}$	Condition: I_{source}	Admissible sink current $I_{SINK\text{ max.}}$	Pulses per revolution*
Type	VDC	mA	VDC	mA	mA	
12 / 24 / 48 V	≤ 0.4	1	2.5–5.5	1	1	2
Subject to change						
Standard value, can vary depending on fan series.						
* Depending on the fan electronics other values are feasible e. g. 3 or 6.						

Signal output voltage

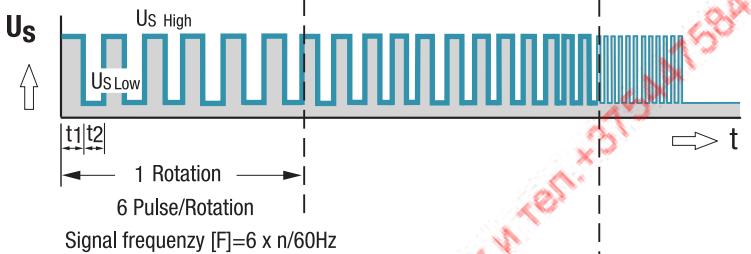

Standard signal for all models (exceptions see below)

For multi option control input and 4100 NH7 and NH8

All TD Fans e.g. 6300 TD

Fan speed

Note:

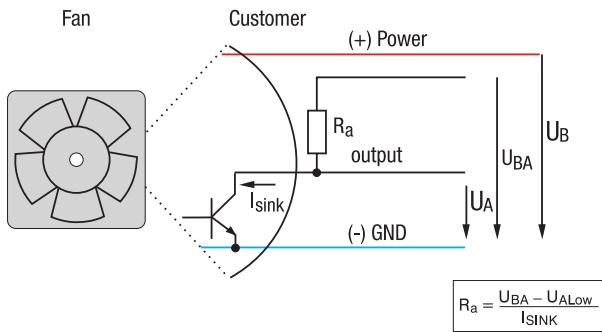

Fans that come with these fan specials could have variations with respect to the temperature range, voltage range, and power consumption compared to standard fans without specials.

Alarm signal /17

Speed limit

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous high signal during trouble-free operation within the permissible voltage range.
- Low signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to high.

Electrical hookup

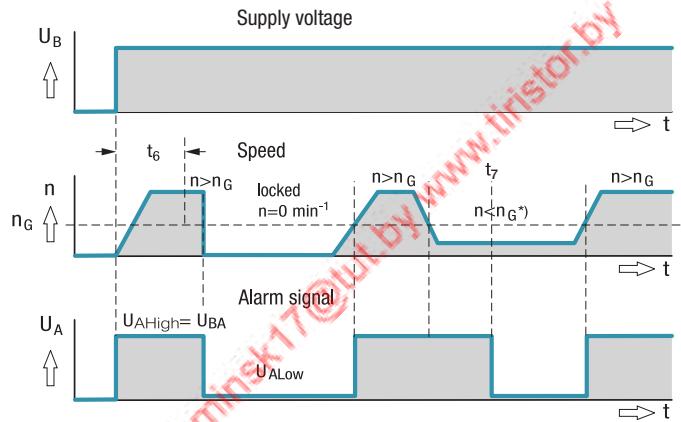

All voltages measured to ground.

External load resistor R_a from U_A to U_B required.

Available on request:

- Integrated signal storage for subsequent recognition of short-term faults (latch).
- Alarm circuit open collector or TTL.
- Electrically isolated for maximum device safety; Defects in the power circuit do not affect the alarm circuit.

t_6 = Alarm signal suppression during startup

t_7 = Alarm delay time during run-up

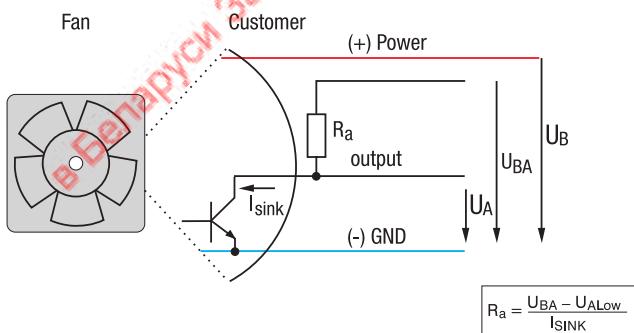

* $n <$ speed limit n_G by braking or locking

Alarm signal /19

Speed limit

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous low signal during trouble-free operation within the permissible voltage range.
- High signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to low.

Electrical hookup

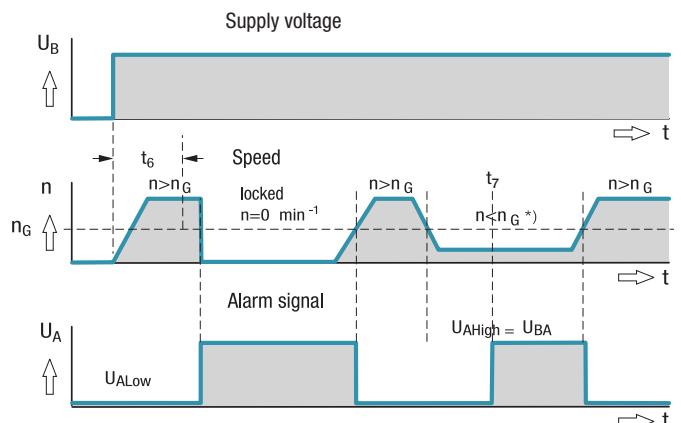

All voltages measured to ground.

External load resistor R_a from U_A to U_B required.

Available on request:

- Integrated signal storage for subsequent recognition of short-term faults (latch).
- Alarm circuit open collector or TTL.
- Electrically isolated for maximum device safety; Defects in the power circuit do not affect the alarm circuit.

t_6 = Alarm signal suppression during startup

t_7 = Alarm delay time during run-up

* $n <$ speed limit n_G by braking or locking

Note:

Fans that come with these fan specials could have variations with respect to the temperature range, voltage range, and power consumption compared to standard fans without specials.

Alarm signal data	Alarm output voltage U_A Low		Condition: $I_{sink} =$		Alarm output voltage U_A High		Condition: I_{source}		Max. permissible sink current
	Type	VDC	mA	VDC	mA	VDC	mA		
12 / 24 V		≤ 0.4	$n > n_G$	2	≤ 30	$n < n_G$	0	30	10
48 V		≤ 0.4	$n > n_G$	2	≤ 60	$n < n_G$	0	60	10
Subject to change		Standard value, can vary depending on fan series.							

Selectable parameters:

- Speed limit
- t_6 Alarm signal suppression during start-up
- t_7 Alarm delay time during run-up

For existing products, information about alarm signals is included in the product data sheet.

Alarm signal /37

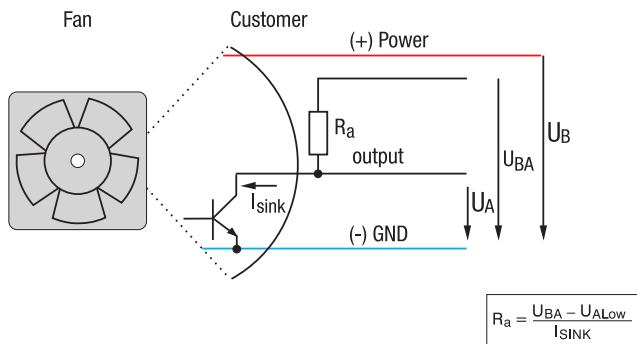

Go / NoGo alarm

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous high signal during trouble-free operation within the permissible voltage range.
- Low signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to high.

Available on request:

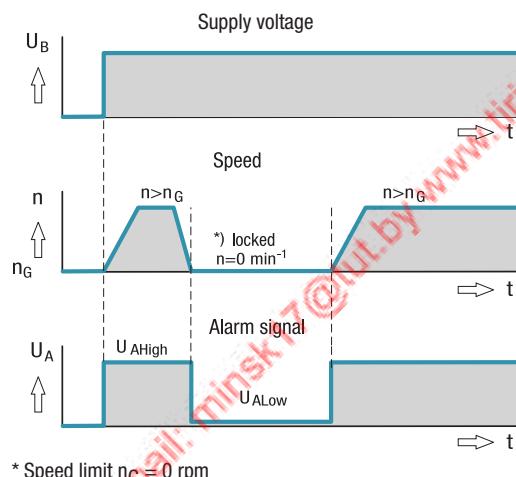

- Alarm circuit TTL compatible.

Electrical hookup

All voltages measured to ground

External load resistor R_a from U_A to U_{BA} required.

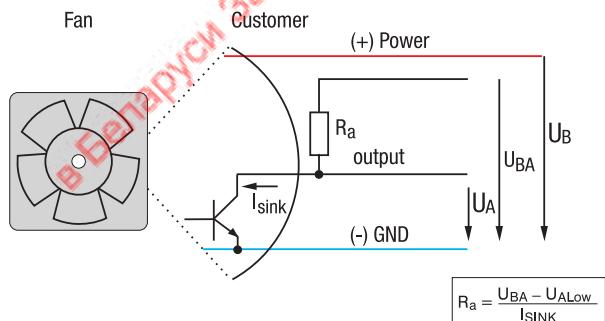

Alarm signal /39

Go / NoGo alarm

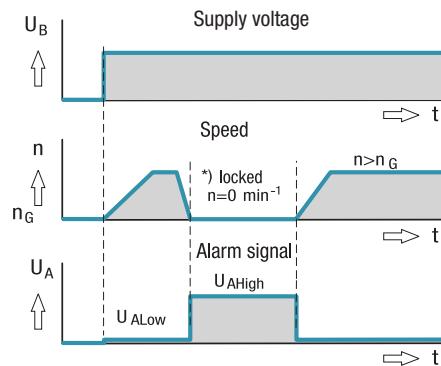

- Alarm signal for speed monitoring
- Signal output via open collector
- The fan emits a continuous low signal during trouble-free operation within the permissible voltage range.
- High signal when speed limit is not reached
- After elimination of the fault, the fan returns to its setpoint speed; the alarm signal reverts to low.

Electrical hookup

All voltages measured to ground

External load resistor R_a from U_A to U_{BA} required.

Note:

Fans that come with these fan specials could have variations with respect to the temperature range, voltage range, and power consumption compared to standard fans without specials.

Alarm signal data	Alarm output voltage U_A Low		Condition: $I_{sink} =$		Alarm output voltage U_A High		Condition: I_{source}		Max. permissible sink current
	Type	VDC	mA	VDC	mA	VDC	mA		
12 / 24 V	≤ 0.4	$n > n_G$	2	≤ 30	$n < n_G$	0	30	10	
48 V	≤ 0.4	$n > n_G$	2	≤ 60	$n < n_G$	0	60	10	
Subject to change		Standard value, can vary depending on fan series.							

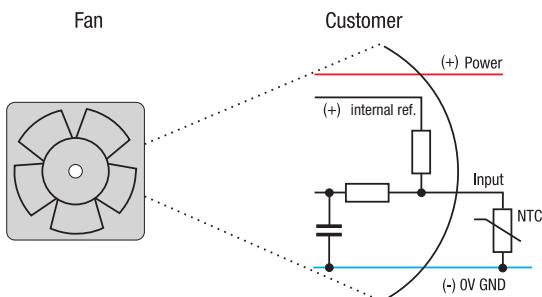

For existing products, information about alarm signals is included in the product data sheet.

Speed setting via temperature sensor

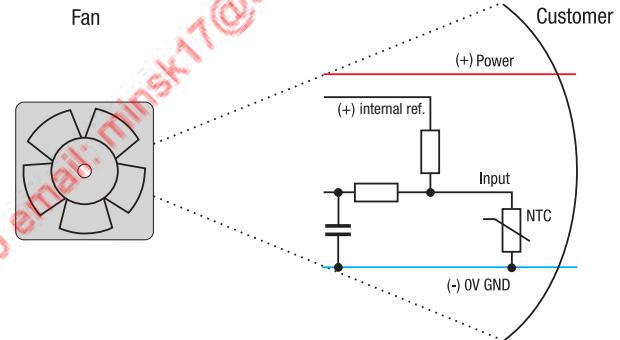

External temperature sensor type T

- Ext. NTC resistor type LZ370 (p. 272) is required (not included in the standard scope of delivery)

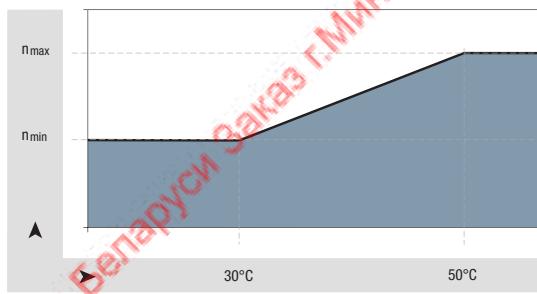

Internal temperature sensor type I

- NTC integrated in the fan hub

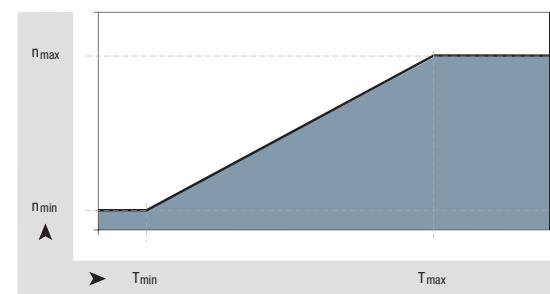

**Standard speed/temperature curve
for type T and type I**

$$n_{\min} \approx \frac{1}{2} n_{\max}$$

$$T_{\min} \approx 30^{\circ}\text{C}; T_{\max} = 50^{\circ}\text{C}$$

**Optionally available with selectable
temperature/speed curve**

$$n_{\min} \approx 800 \text{ } 1/\text{min}$$

$$n_{\max} \text{ based on model}$$

$$T_{\min} \approx 5^{\circ}\text{C}$$

$$T_{\max} \leq 85^{\circ}\text{C, based on model}$$

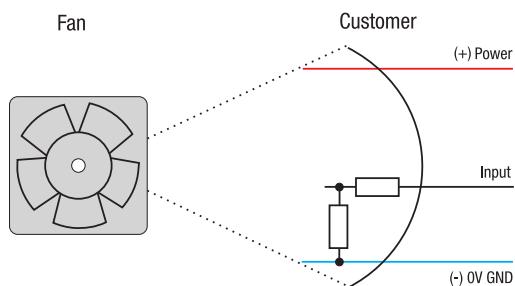

Speed setting via control voltage or PWM signal

- The control variable is a PWM signal or analog control voltage.

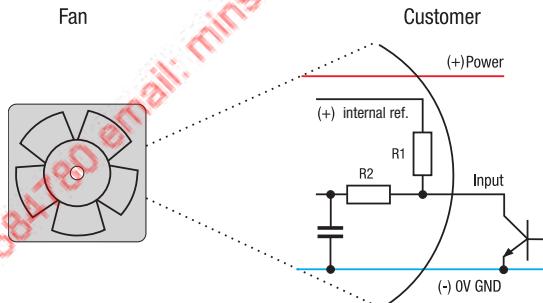

Speed setting via analog control voltage type A

- Standard control range 0...10 V

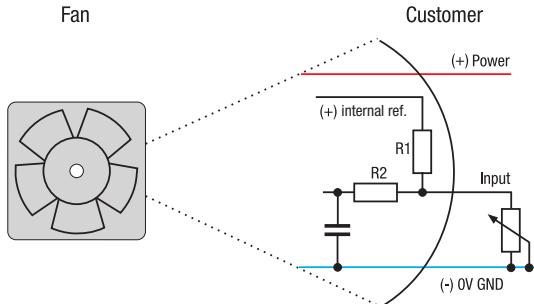

Speed setting via PWM type P

- Standard PWM signal in two versions
 - a) PWM frequency, mainly 1...10 kHz (0-100%), Open-collector input
 - b) Four-wire interface according to Intel specifications for 12 VDC fans, PWM frequency 25 kHz, incl. speed signal /2

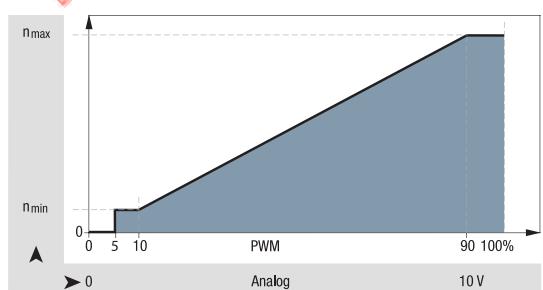

- Optional with potentiometer

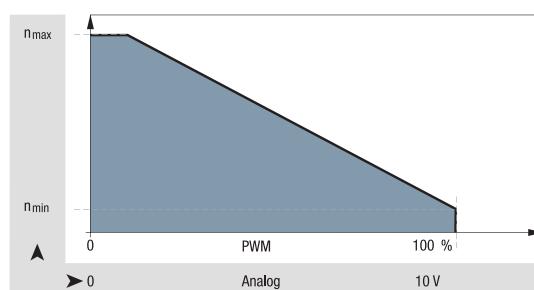

Internal reference = + 5 V
R1 typical 4.7...10 kΩ
R2 typical 100 kΩ

Standard P/A curve

Optionally available with selectable P/A speed curve

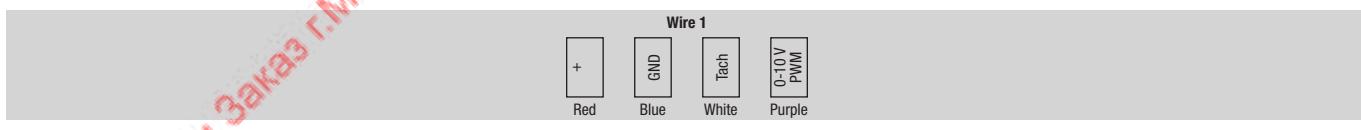

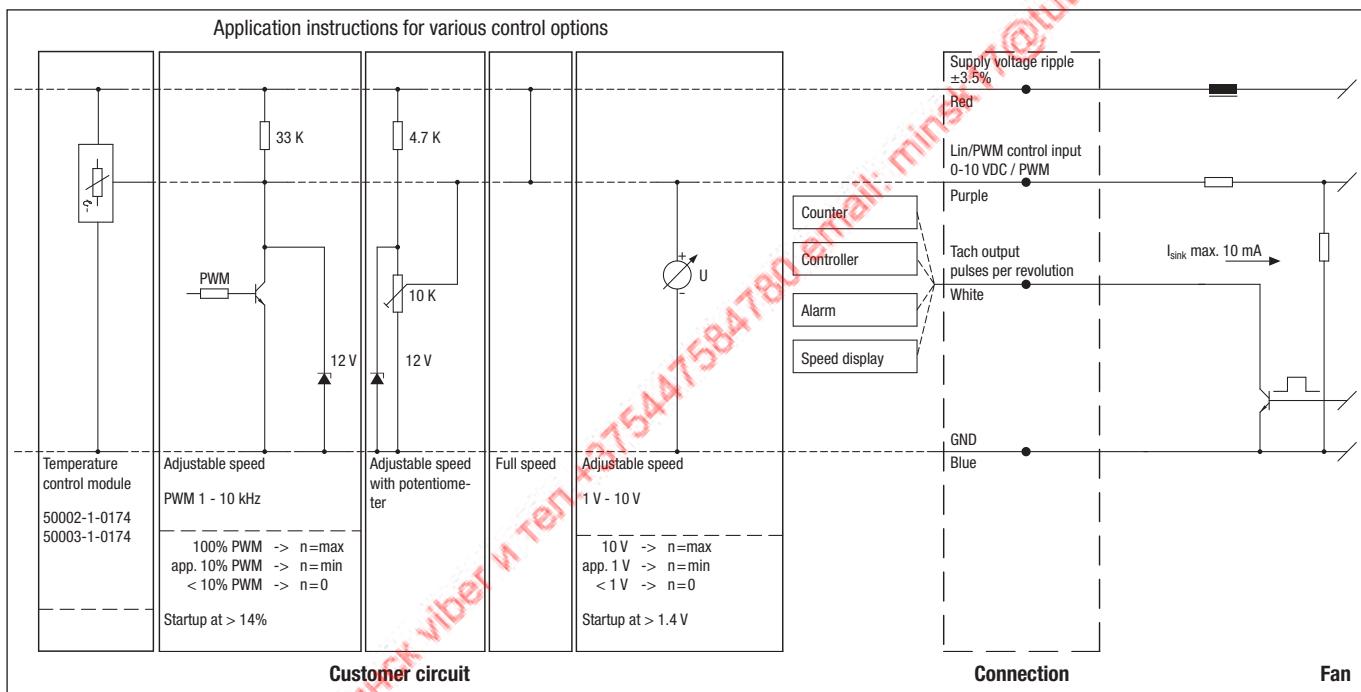

Speed setting via multi-option control input

- Customer can operate input either with PWM signal, analog voltage, external temperature control module, or resistor.
- The control signal speed characteristics of the fan differ from the standard curve of the A and P inputs (see p. 185).
- To reach the maximum speed, the control cable must be connected to the U_B.
- The control input is usually combined with an open collector tachometer (type /2, see page 178).

Speed setting via multi-option control input type 0

Wire	Connection	Color	Assignment/function
1	Tach	White	Tach output: 3 Impulse/revolution
	0-10 V / PWM	Purple	Control input (impedance 100 kV)

- **Material:** Housing: Die-cast aluminum
Impeller: GRP¹⁾ (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Counterclockwise, looking towards rotor
- **Connection:** (+) and GND: AWG 22, Speed signal and control input: AWG 24
all wires: UL 1007, TR 64
- **Highlights:** FanCheck
PWM control input
- **Weight:** 755 g

Subject to change

FanCheck is a diagnostic tool integrated into the fan electronics for determining the remaining service life of the fan, dependant, upon temperature, speed, and preset environmental parameters. The FanCheck system emits a pulse width modulated signal, which reflects the remaining service life of the fan. The pulse width is proportional to the remaining service life of the fan. The FanCheck signal has a pulse width of 10 % at the end of the service life and a pulse width of 90 % with full service life. Basic data, such as the ball bearing system, bearing lubrication or lubricant used, are programmed in advance as parameters into the software. The customer defines the environmental conditions, such as the use of fans in moist, dusty, or dirty environments; other parameters such as ambient temperature and speed are determined continuously. Based on all the influencing parameters, the software can, by means of a complex algorithm, calculate the remaining service life for each individual fan.

To be able to better demonstrate function, the FanCheck system possesses a demo function for samples, in which the service life expires much more quickly than in real time. Using the alarm signal, tacho signal or an additional lead, the remaining service life can be retrieved and analyzed. Depending on the selected feature, the remaining service life can be emitted in the form of a PWM or an analog signal. In this way, optimum benefit is gained from the individual service life of each fan; thus, a fan exchange that is too early or too late can be avoided.

Protected fans

against environmental conditions

- Capable of satisfying special requirements for a broad range of applications
- Resistance of fans to environmental conditions such as dust, splashing water, humidity, spray water, and salt spray.
- Competent solutions to adapt fans to environmental conditions.

Moisture protection

A coat of paint over the motor and circuit board protect the fans against spray water and condensation.

Degree of protection IP 54 / IP 68*

In the degree of protection IP 54, the motor and circuit boards are coated and therefore protected against spray water and moisture.

The degree of protection IP 68 is important for ebm-papst products, as it ensures a high degree of protection for the encapsulated motor and electronics against foreign bodies and water, while protecting the user against potential hazards upon contact. Degrees of protection higher than IP 68 are possible on request.

Solutions that are available and are used may differ depending on the fan size.
We would be glad to develop solutions tailored to the demands of your application.

Salt spray protection

Salt spray represents one of the most difficult requirements for product durability. ebm-papst has the technology to protect fans and blowers from salt spray reliably and for the long term.

Stainless steel bearings

Special bearings made of stainless steel provide additional protection.

Degree of protection – IP code*

Protection against foreign bodies and accidental contact (first digit)		Water protection (second digit)	
X	No protection	X	No protection
1	Protection against foreign objects > 50 mm (back of the hand)	1	Protection against dripping water or condensation
2	Protection against foreign objects > 12 mm (finger)	2	Protection against dripping water, fans tilted 15° from vertical
3	Protection against foreign objects > 2.5 mm (tool)	3	Protection against sprayed water up to 60° from vertical
4	Protection against foreign objects > 1 mm (wire)	4	Protection against sprayed water from all sides
5	Protection against dust in harmful quantities	5	Protection against low-pressure water jets
6	Dust-proof	6	Protection against high-pressure water jets
		7	Protection against temporary submersion (15 cm - 1 m)
		8	Protection against continuous submersion

* IP = International degree of protection marking

ACmaxx / EC axial fans

**Technical information
about ACmaxx / GreenTech EC tubeaxial fans**

Progress made by ebm-papst

The best example: The ACmaxx fans from ebm-papst that offer substantial benefits thanks to an ingenious yet simple improvement over conventional AC fans.

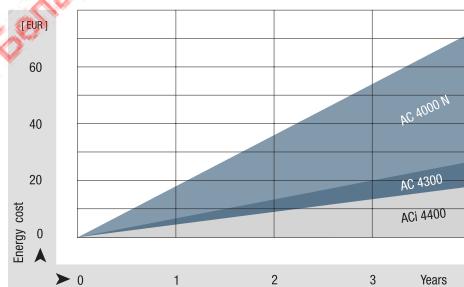

The aim in developing the ACmaxx series was to raise the technical standard of the conventional AC fan significantly and in the process facilitate a transition to new technology by maintaining the same fan sizes. In short, to make sure that the fans can be replaced 1:1 without any changes to the peripherals or voltage situation.

ebm-papst offers two generations of ACmaxx products that meet different needs.

What the ACmaxx and GreenTech EC compact fans have in common:

Energy efficiency

A drive concept based on state-of-the-art GreenTech EC technology with outstanding motor efficiency. Compared to AC fans of the same size, ACmaxx energy consumption is up to 77 % lower – for greater cooling capacity! The energy savings alone means that the products pay for themselves after only a few months. The savings over the entire service life, especially in systems with multiple fans, is considerable.

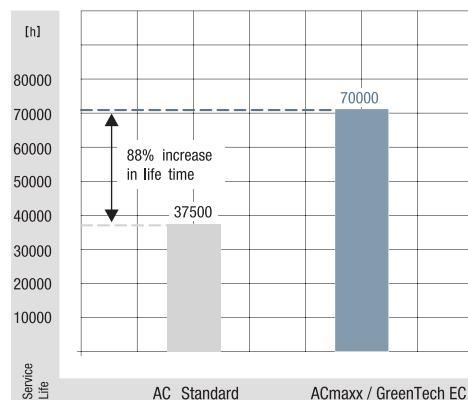

Independent of the power frequency and line voltage

The ACmaxx and GreenTech EC tubeaxial fans are prepared for direct connection to a wide range of AC voltages and frequencies. The speed, and thus important properties of the fan such as air flow and noise, are independent of the power frequency and do not change, even within the defined voltage range. Voltage fluctuations in the power system are automatically compensated for.

Long service life

The efficiency of ACmaxx and GreenTech EC tubeaxial fan motors is up to 75 % greater than that of conventional AC fan variants. This not only saves energy, it also means less self-heating of the motor. Especially the bearing system responds positively to the low self-heating. The reason why the fans have a service life that is up to 85 % longer! This also extends the service and maintenance intervals significantly. Investments in replacement fans and every more expensive downtime are manageable small.

ACmaxx / EC axial fans

**Technical information
about ACmaxx / GreenTech EC tubeaxial fans**

Safety

- Safety certifications: UL, CSA and VDE 0805 / EN60950. VDE 0700 / EN60335 on request.
- Our fans have the CE mark of conformity.
- EMC protection:
 - > EN61000-4-4 Level 1 (1 kV or 2 kV) B
 - > EN61000-4-2 Level 8 kV/15 kV or 4 kV/8 kV
 - > EN61000-4-3
 - > EN61000-4-6
 - > EN61000-4-8
 - > EN55022 Class B

The environment

AC fans are extremely common and are used in a wide variety of applications. In control cabinet cooling, beer coolers, cooling cabinets, wood-burning stoves, medical devices – all have different requirements for resistance to environmental conditions. ACmaxx and GreenTech EC tubeaxial fans offer the same features for moisture protection, splash water, and tougher environmental conditions.

Particular design features of the GreenTech EC tubeaxial fan

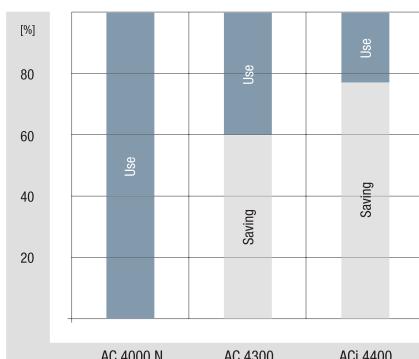

(ACi 4400): GreenTech EC compact fan is more compact!

As large as existing AC fans – and not a bit larger. This is the greatest feature of the ACi 4400 GreenTech EC tubeaxial fans. Even in the hub area, the fan does not differ from typical 119 x 119 x 38 mm AC fans. Out with the AC, in with the ACi 4400 GreenTech EC tubeaxial fans – it's that simple.

The GreenTech EC tubeaxial fan is more efficient!

ACmaxx saves energy, and the GreenTech EC tubeaxial fan generation saves even more. While an AC fan at 50 Hz can barely reach an overall efficiency of 5-6 %, the ACmaxx makes it to about 20-25 %. With the new ACi 4400 GreenTech EC tubeaxial fans, a remarkable level of up to 30 % is reached. This is the result of the optimization of the entire package made up of the drive, electronics, AC/DC conversion, and aerodynamics. Thus the new GreenTech EC tubeaxial fan series boasts energy savings of almost 75 % compared to the corresponding AC fan, thus providing significantly greater savings than the 40 % level of the old AC 4300 generation.

The GreenTech EC tubeaxial fan is quieter!

The ACi 4400 GreenTech EC tubeaxial fan is quieter! Quieter than AC fans and quieter than the existing ACmaxx generation. The reason for this is the optimized aerodynamics and the drive, which is optimized for minimum structure-borne noise. Thus the fan is only half as loud at a comparable air performance, and is up to 6 dB(A) quieter at some operating points.

Speed independent of voltage and frequency

For the ACi 4400 GreenTech EC tubeaxial fans, the speed, and thus the flow quantity and operating noise, are independent of the power supply and power frequency.

Versions are available for 115 VAC with a voltage range from 85 to 132 VAC and 230 VAC with a voltage range of 195 to 265 VAC. Operation with DC voltage is also possible. Voltage fluctuations and frequency differences in the power system are compensated for automatically.

ACmaxx / EC axial fans

**Technical information
about ACmaxx / GreenTech EC tubeaxial fans**

Particular design features of the ACmaxx:

Prepared for all common AC voltages

These models have a very wide voltage range from 85 to 265 VAC – the global voltage range, so to speak. This allows the fan to be used around the world, opening up large savings potentials. In addition to reduced logistics effort and stock keeping, worldwide availability is key. ACmaxx is compatible with every power supply and no switching is needed. From 85 to 265 volts and power frequencies of 50 and 60 Hz. Voltage fluctuations in the power system are automatically compensated for.

Higher performance

Unlike conventional AC technology, the state-of-the-art drive concept of this fan series is not linked to a fixed power frequency. This allows the motor speed to be increased over a wide range. Thus ACmaxx provides significantly greater air flow and significantly increased pressure.

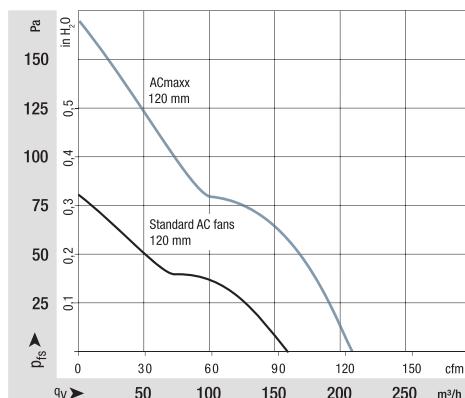

Greater flexibility

The flexibility of ACmaxx is unique. With its intelligent features, ACmaxx can be adapted individually to the specific application: standby mode, overload mode at peak times, or night reduction all the way to temperature-controlled quiet operation are all possible. From speed monitoring to long-term function checks using an alarm or speed signal

outputs, ACmaxx offers optional interfaces that allow you to monitor an operation easily and quickly.

You can find further information about these fan options in the "Fans specials" chapter, starting on page 175.

Or you can simply contact our application engineers to discuss your ideal ACmaxx or GreenTech EC tubeaxial fan.

Subject to change

Speed variants available on request.

Air performance measured according to: ISO 5801.
Installation category A, without contact protection.
Noise: Total sound power level L_{WA} ISO 10302
measured on a hemisphere with a radius of 2 m.
Sound pressure level L_{pA} measured at 1 m distance
from fan axis.
The values given are applicable only under the specified
measuring conditions and may differ depending on the
installation conditions.
In the event of deviation from the standard configuration,
the parameters must be checked after installation!
For detailed information see
<http://www.ebmpapst.com/general conditions>

Max. 205 m³/h

ACmaxx axial fans

□ 119 x 25 mm

- **Material:** Housing: GRP¹⁾ (PBTP)
Impeller: GRP¹⁾ (PA)
- **Direction of air flow:** Exhaust over struts
- **Direction of rotation:** Counterclockwise, looking towards rotor
- **Connection:** Via single wires AWG 22, TR 64
- **Highlights:** Universally usable for all power voltages between 85 and 265 VAC
- **Weight:** 370 g

- **Possible special versions:**
(See chapter DC fans - specials)
 - Speed signal
 - Go / NoGo alarm
 - Alarm with speed limit
 - External temperature sensor
 - Internal temperature sensor
 - PWM control input
 - Analog control input
 - Moisture protection

- **Direction of rotation:** Clockwise, looking towards rotor
- **Connection:** Via 3-pin Europa terminal strip max. 1.5 mm²
- **Highlights:** Universally usable for all main voltages between 85 and 265 VAC, 50-60 Hz, Boost function
Vibration-isolated motor
Optional: new impeller for high pressure. Two speeds over jumper adjustable
400 g
- **Weight:**

1) Fiberglass-reinforced plastic

Air performance measured according to: ISO 5801.
Installation category A, without contact protection.
Noise: Total sound power level L_{WA} ISO 10302
measured on a hemisphere with a radius of 2 m.
Sound pressure level L_{pA} measured at 1 m distance
from fan axis.
The values given are applicable only under the specified
measuring conditions and may differ depending on the
installation conditions.
In the event of deviation from the standard configuration,
the parameters must be checked after installation!
For detailed information see
<http://www.ebmpapst.com/general conditions>

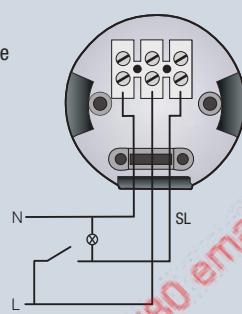

Highest energy efficiency: 0.03 - 0.045 W/m³/h free air (specific fan power).
Boost speed: 2 speed settings possible via boost function.
Vibration isolation: Reduced transmission of vibrations from motor to housing.
Intelligence: Can be expanded to include set value requirement and signal outputs as an option.

AC axial fans

Technical information

Product line

The renowned ebm-papst AC fans are used when DC voltage is not available. The AC range of fans is based on experience gained from decades of development know-how, millions of units in series production, and the innovation competence of a world-wide technology pioneer.

In this catalog, we offer you the broad spectrum of our AC fans. In addition to complete systems, you will also find fans without external housing. They offer economic benefits whenever the air duct design can be integrated in the respective device.

Variety of sizes

AC fans are available in a variety of sizes with either air exhaust or air intake over struts. Silent running models with sleeve bearings. Electrical connection with plug connection or external exposed connection wires are available.

Shaded-pole or capacitor motors

Fan drives by shaded-pole or capacitor motors, most of which incorporate the world-famous ebm-papst external rotor principle. The fan blades are directly attached to the external rotor of the external rotor motor. This construction combining high performance with profitability.

Flat built AC fans

ebm-papst also has AC fans with a particularly flat construction and an internal rotor motor. Their advantage: quick start to full speed. A plastic impeller and the smaller and lighter internal rotor motor result in lower rotational inertia.

Bearings

AC fans with sleeve bearings are powered by Class E insulated motors. Fans with ball bearings are equipped with Class B, E, or F insulated motors.

Degree of protection

All ebm-papst fans conform to the requirements of IP 20. IP 54 / IP 65 and special degrees of protection are available on request.

AC voltage

The line of AC fans for Euro voltage according to IEC 60038 (230 V ± 10 %) is also available in 115 V.

Frequencies

AC fans can be operated at frequencies of 50 or 60 Hz. In this case, their technical data changes accordingly.

Capacitor

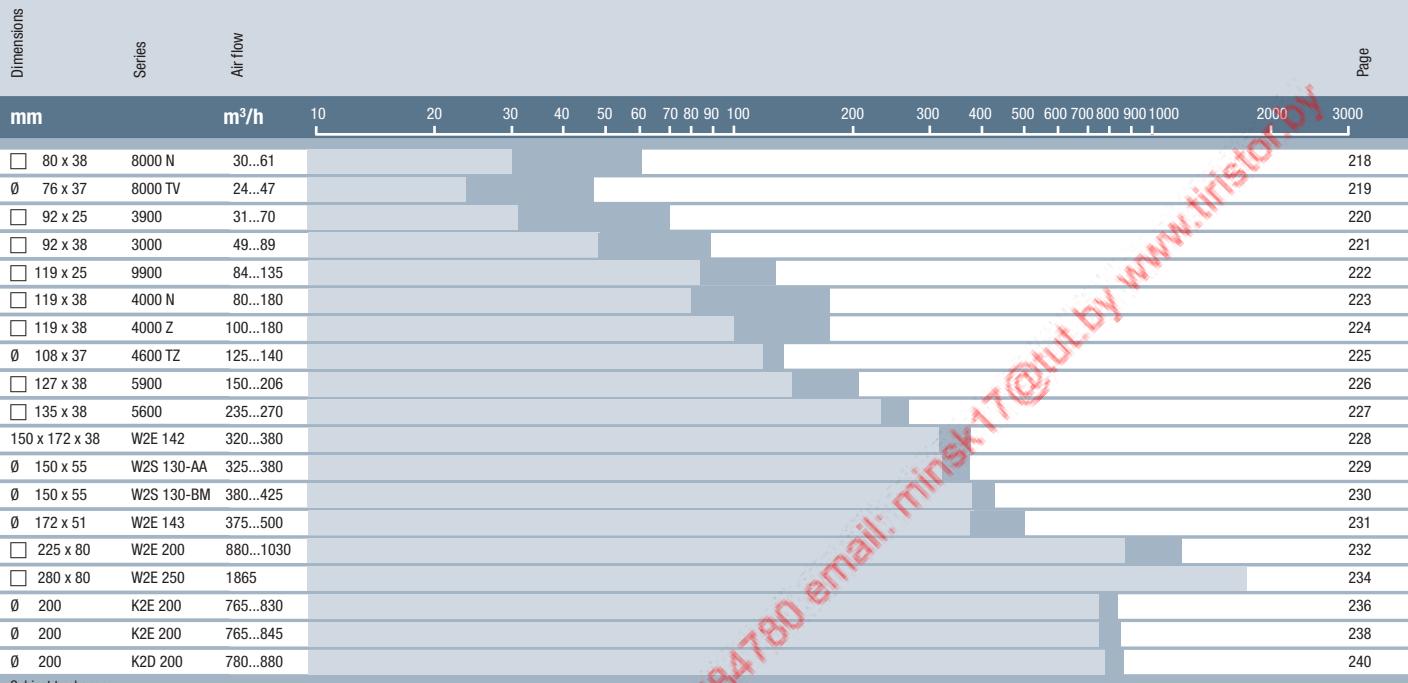

Fans driven by capacitor external motors provide particularly high operating efficiency. Generally, the required motor run capacitor is already integrated in the fan housing.

Overloading

Almost all AC fans are protected against overloading (e. g. due to locked rotor) – either impedance protected (marked "Impedance protected" or "Z. P.") or equipped with a thermal switch (marked "Thermally protected" or "Th. P."). The model designation of these fans ends with "S".

The air flow and sound level of fans without external housing depend on the installation conditions.

The stated air flow and noise have been measured with an orifice 76.5 mm Ø at a distance of approx. 17 mm from the mounting bracket.

The air flow capacity of fan series 8000 N is achievable because of the exceptionally favorable installation conditions. The noise in the optimal operating range can be measured for these fans only in a specific application.

Subject to change

The air flow and sound level of fans without external housing depends on the installation conditions.

The stated air flow and noise have been measured with an orifice 109 mm Ø at a distance of approx. 17 mm from the mounting bracket.

The air flow capacity of fan series 4000 Z is achievable because of the exceptionally favorable installation conditions. The noise in the optimal operating range can be measured for these fans only in a specific application.

AC centrifugal fans

Technical information

Product line

The renowned ebm-papst AC fans are used when DC voltage is not available. The AC range of fans is based on experience gained from decades of development know-how, millions of units in series production, and the innovation competence of a world-wide technology pioneer.

In this catalog, we offer you the broad spectrum of our AC fans. In addition to complete systems, you will also find fans without external housing. They offer economic benefits whenever the air duct design can be integrated in the respective device.

Variety of sizes

AC fans are available in a variety of sizes with either air exhaust or air intake over struts. Silent running models with sleeve bearings. Electrical connection with plug connection or external exposed connection wires are available.

Shaded-pole or capacitor motors

Fan drives by shaded-pole or capacitor motors, most of which incorporate the world-famous ebm-papst external rotor principle. The fan blades are directly attached to the external rotor of the external rotor motor. This construction combining high performance with profitability.

Flat built AC fans

ebm-papst also has AC fans with a particularly flat construction and an internal rotor motor. Their advantage: quick start to full speed. A plastic impeller and the smaller and lighter internal rotor motor result in lower rotational inertia.

Bearings

AC fans with sleeve bearings are powered by Class E insulated motors. Fans with ball bearings are equipped with Class B, E, or F insulated motors.

Degree of protection

All ebm-papst fans conform to the requirements of IP 20. Fans conforming to IP 54 / IP 65 and special degrees of protection are also available on request.

AC voltage

The line of AC fans for Euro voltage according to IEC 60038 (230 V ± 10 %) is also available in 115 V.

Frequencies

AC fans can be operated at frequencies of 50 or 60 Hz. In this case, their technical data changes accordingly.

Capacitor

Fans driven by capacitor external motors provide particularly high operating efficiency. Generally, the required motor run capacitor is already integrated in the fan housing.

Overloading

Almost all AC fans are protected against overloading (e. g. due to locked rotor) – either impedance protected (marked "Impedance protected" or "Z. P.") or equipped with a thermal switch (marked "Thermally protected" or "Th. P."). The model designation of these fans ends with "S".

Subject to change

The air flow and sound level of the centrifugal fans without external housing depend on their individual installation conditions. The stated air flow and noise levels have been measured under the following conditions:

Centrifugal fan mounted on a base plate
220 x 220 mm.
Cover plate 220 x 220 mm with an air inlet of
Ø 86 mm, concentric to the impeller.

Air performance measured according to: ISO 5801.
Installation category A, with ebm-papst inlet ring without contact protection.
Noise: Total sound power level L_{WA} ISO 10302
measured on a hemisphere with a distance of 2 m.
Sound pressure level L_{pA} measured at 1 m distance
from fan axis.
The values given are applicable only under the specified
measuring conditions and may differ depending on the
installation conditions.
In the event of deviation from the standard configuration,
the parameters must be checked after installation!

ebm-papst offers a comprehensive selection of accessories for optimum fan operation, from temperature sensors for speed-controlled fans, to finger guards for all variants, to cables, filters, and screens, to spacers and installation parts. Even in the case of very special parts, you can be sure: We will assist you every way possible. The sales experts at ebm-papst will be happy to assist you with your question concerning fan installation and use.

From selection to accessories:

Insist on the efficient and reliable service provided by ebm-papst.

Finger guards

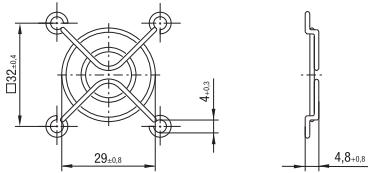

- **Material:** Galvanized or nickel-plated steel wire
 - **Note:** Finger guard according to DIN EN ISO 13857 (previously EN 294). Additional finger guards that do not satisfy DIN EN ISO 13857 available on request.
- Our finger guards are designed specifically to be used with ebm-papst fans. They combine the highest degree of safety with minimum effect on the operating noise. Please note that the safety-related clearances cannot be guaranteed when finger guards made by other manufacturers are used.

Filter fan guards

- **Material:** Guard cover: Injection-molded polycarbonate (PC) with mat surface.

Mounting plate: wire mesh with black powder coating

Filter pad: white, synthetically bonded fibers

- **Note:**

Filter fan guards suitable for fitting on axial fan series in sizes:

60 mm, 80 mm, 92 mm, 119 mm, ø 172 mm. All filter units fit directly on the existing mounting holes of the fans.

Filter fan guards consisting of 3 parts: external guard cover, internal mounting plate, and replaceable filter pad.

The filter pad can be replaced quickly and easily via a quick release on the guard cover. The filter pads can be replaced even while the fan is running, as protection is provided by the welded wire mesh.

FF60 / FF80

Fan size: 60 x 60 mm / 80 x 80 mm

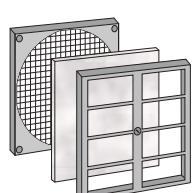

FF92 / FF 119

Fan size: 92 x 92 mm / 119 x 119 mm

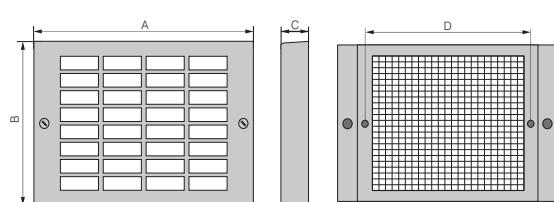

Filter performance

The filter fan guard filters 75 % of dust particles with a size of 5-10 microns and can withstand temperatures of up to 100 °C. Filter class G3 according to DIN EN 779. Flame-retardant according to DIN 53438, class F1. When a clean filter is installed, a reduction of air flow of 20-30 % is possible.

FF 172

Fan size: Ø 172 mm

Finger guards

Cables for energy-saving motors 115/230 VAC

Order number	a
13060-4-1040	450
13061-4-1040	1500

Subject to change

- Easy speed programming
- Battery operated
- User-friendly navigation menu
- Protective cover with folding stand

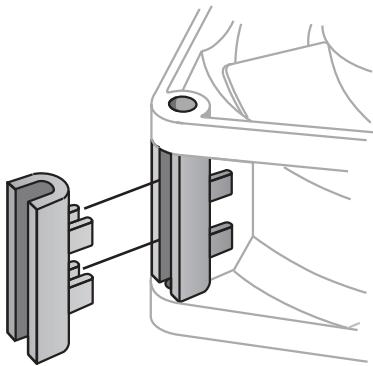

For Energy Saving Motor (ESM) based products

Order number
CBC 000-AF08-01

Subject to change

Makes quick work of programming the two ESM adjustable operating speeds. Eliminates the need for a PC, software adapter and second cable. Especially for use in production or by sales representatives. Automatic shut-off function for extended battery life. Mini USB plug for downloading software updates. Batteries, programming cable, and operating instructions included in scope of delivery.

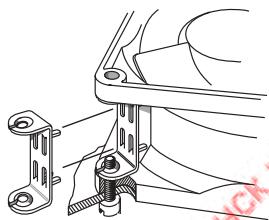

Accessories

In addition to the accessories and installation parts listed here, ebm-papst also supplies a number of additional, sometimes very special parts for fans. Our company sales team is happy to offer you their expert assistance with all your questions regarding the installation and use of our fans.

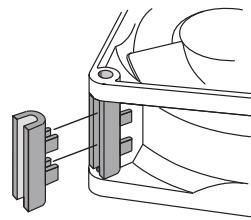

Fan series	Type	Order number
4300 N	LZ212	9920212000
3400 N, 4400 F, 8400 N, 8450	LZ261	9920261000
4000, 5100, 5200, 5600, 5900, 7100, 7200, 9000	LZ210	9920210000
6200, 6300, 6300 N, 6400, 7100, 7200	LZ215	9920215000
For all temperature-controlled fans	LZ370	4871104201
For all fans with mounting holes of 4.3 mm	LZ550	6030020000
Subject to change	LZ551	6030053002

LZ212

Screw clip of rustproof spring steel.
For mounting fans with threaded pin
3.5 DIN EN ISO 1478 (7970).

LZ261

Spacer of fiberglass-reinforced plastic.
For mounting with screws through both fan
mounting flanges.

LZ210

Screw clip of hardened steel.
For mounting fans with threaded pin 6-32 UNC
or 3.5 DIN 7970.

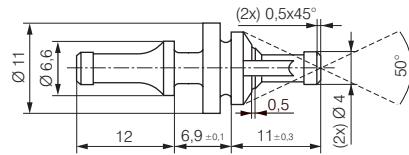

LZ370

Required performance data:
 $R_{25} = 100 \text{ k}\Omega \pm 5\% @ 25^\circ\text{C}$
 B-value = $4190 \pm 2\%$
 $P_{max} = 0.25 \text{ W}$

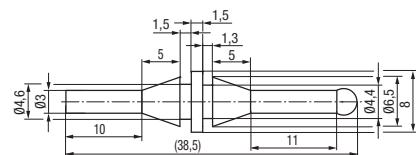

Temperature sensor for speed-controlled fan
operation. Temperature range 30...50 °C.

LZ550

Rubber anti-vibration mounts
for fans with a hole diameter of $4.3 \pm 0.2 \text{ mm}$
and flange thickness of 3 to 5.5 mm .
For a carrier plate with a hole diameter of
 $6.5 \pm 0.15 \text{ mm}$ and plate thickness of 1 to 2 mm.

LZ551

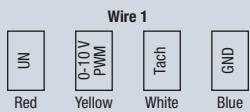

Rubber anti-vibration mounts
for fans with a hole diameter of $4.3 \pm 0.2 \text{ mm}$
and flange thickness of 2 to 4 mm .
For a carrier plate with a hole diameter of
 $4.4 \pm 0.15 \text{ mm}$ and plate thickness of 1 to 2 mm.

Connection diagrams EC E)

Technical features (nominal voltage 24 / 48 VDC):

- Tach output
- Motor current limitation
- Soft start
- Control input 0-10 VDC / PWM
- Overvoltage detection
- Thermal overload protection for electronics
- Reverse polarity protection

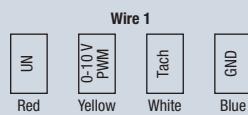

Wire	Designation	Color	Assignment/function
1	UN +24 VDC	Red	Power supply 24 VDC, supply voltage ripple $\pm 3.5\%$
	0-10V /PWM	Yellow	Control input Re > 40 K
	Tach	White	Tach output, 3 pulses per revolution, Isink max. = 10 mA
	GND	Blue	Reference ground

Connection diagrams EC G)

Technical features (nominal voltage 24 / 48 VDC):

- Tach output
- Soft start
- Control input 0-10 VDC / PWM

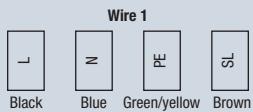

Wire	Designation	Color	Assignment/function
1	UN +24 VDC	Red	Power supply 24/48 VDC, supply voltage ripple $\pm 3.5\%$
	1-10V /PWM	Yellow	Control input Re > 100 K
	Tach	White	Tach output: 2 pulses/revolution (M1G045/M1G055) 3 pulses/revolution (M1G074/M1G084)
	GND	Blue	Reference ground

Connection diagrams EC H3)

Technical features (M3G 055 with 2 speed stages):

- Speed setting input (230V)
- Power limitation
- Motor current limitation
- Soft start
- Thermal overload protection for electronics / motor
- Line undervoltage detection

Wire	Designation	Color	Assignment/function
1	L	Black	Power supply 230 VAC, 50 - 60 Hz, see type plate for voltage range
	N	Blue	Neutral conductor
	PE	Green/yellow	Ground conductor
	SL	Brown	Speed selection: switch open = speed 1; switch closed = speed 2

Connection diagrams EC H4)

Technical features (M3G 055 speed-controlled):

- Output 10 VDC max. 1.1 mA
- Tach output
- Power limitation
- Motor current limitation
- Soft start
- Control input 0-10 VDC / PWM
- Control interface with SELV potential safely disconnected from the mains
- Overvoltage detection
- Thermal overload protection for electronics / motor
- Line undervoltage detection

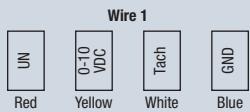

Wire	Designation	Color	Assignment/function
1	L	Black	Power supply 115/230 VAC, 50 - 60 Hz, see type plate for voltage range
	N	Blue	Neutral conductor
	PE	Green/yellow	Ground conductor
2	GND	Blue	GND - Connection for control interface
	0-10 V PWM	Yellow	Control input 0-10 V or PWM, electrically isolated
	10 V/max. 1,1 mA	Red	Voltage output +10 V / 1.1 mA, electrically isolated, not short-circuit-proof
	Tach	White	Tach output: Open collector, 1 pulse per revolution, electrically isolated

Connection diagrams EC J5)

Technical features (nominal voltage 24 / 48 VDC):

- Control input 0-10 VDC / PWM
- Output 10 VDC max. 1.1 mA
- Power limitation
- Soft start
- Motor current limitation
- Tach output
- Thermal overload protection for electronics / motor
- Overvoltage detection
- Line undervoltage detection
- Control interface with SELV potential safely disconnected from the mains

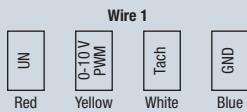

Wire	Designation	Color	Assignment/function
1	UN +24/48 VDC	Red	Power supply 24/48 VDC, supply voltage ripple $\pm 3.5\%$
	0-10 VDC	Yellow	Control input Re $>100\text{ K}$
	Tach	White	Tach output, 3 pulses per revolution, Isink max. = 10 mA
	GND	Blue	Reference ground

Connection diagrams EC (Q)

Technical features:

- Tach output
- Motor current limitation
- Soft start
- Control input 0-10 VDC / PWM
- Overvoltage detection
- Thermal overload protection for electronics
- Reverse polarity protection

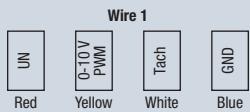

Wire	Designation	Color	Assignment/function
1	UN +12/24 VDC	Red	Power supply 12/24 VDC, supply voltage ripple $\pm 3.5\%$
	PWM/LIN	Yellow	Control input Re > 40 K
	Tach	White	Tach output, 3 pulses per revolution, Isink max. = 10 mA
	GND	Blue	Reference ground

Connection diagrams EC R)

Technical features:

- Tach output
- Motor current limitation
- Soft start
- Control input 0-10 VDC / PWM
- Overvoltage detection
- Thermal overload protection for electronics
- Reverse polarity protection

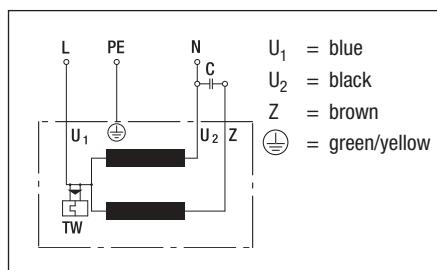

Wire	Designation	Color	Assignment/function
1	UN +48 VDC	Red	Power supply 48 VDC, supply voltage ripple $\pm 3.5\%$
	0-10V /PWM	Yellow	Control input Re > 100 K
	Tach	White	Tach output, 3 pulses per revolution, Isink max. = 10 mA
	GND	Blue	Reference ground

Connection diagrams AC A1) / A3) / C2)

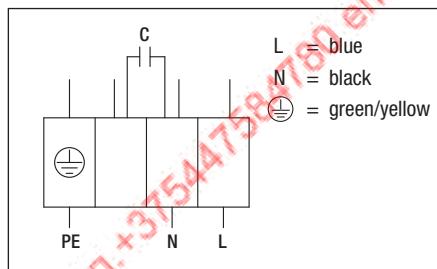

A1) Single-phase capacitor motor (1~ 115/230 VAC power line)

with thermal overload protector wired internally

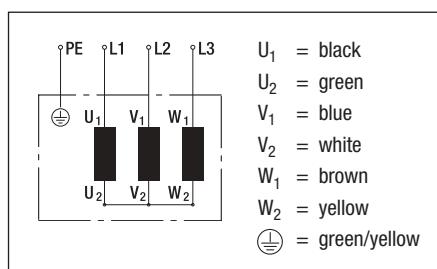

A3) Single-phase capacitor motor (1~ 115/230 VAC power line)

with thermal overload protector wired internally

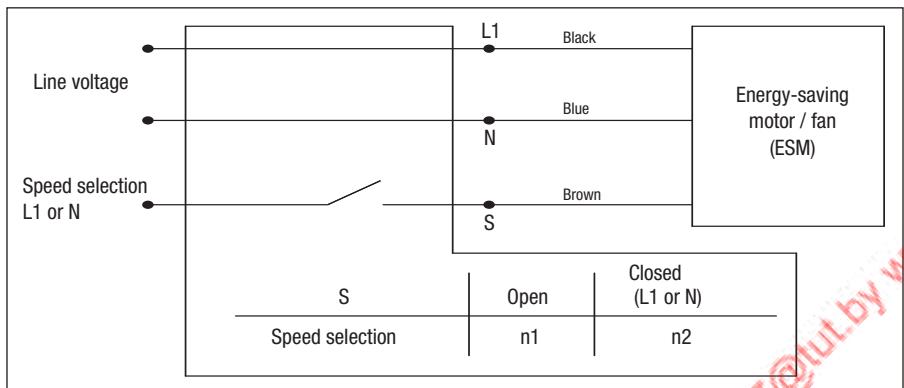

C2) Star connection (3~ 400 VAC power line)

without thermal overload protector

Connection diagrams AC J7)

J7) Energy-saving motor (ESM) (1~ 115/230 VAC power line)
