GEFRAN

THE ACKNOWLEDGED INTERNATIONAL LEADER

Thanks to forty years of experience, Gefran is the world leader in the design and production of solutions for **measuring, controlling, and driving industrial production processes**. We have 14 branches in 12 countries and a network of over 80 worldwide distributors.

QUALITY AND TECHNOLOGY

Gefran components are a **concentrate of technology**, the result of constant research and of **cooperation with major research centres**.

For this reason, Gefran is synonymous with **quality and expertise in the design and production of:**

- > **sensors** for measuring main variables such as **temperature, pressure, position and force**
- > **state-of-the-art components and solutions for indication and control**, satisfying demands for optimisation of processes and intelligent management of energy consumption
- > **automation platforms** of various complexities
- > **electronic drives and electric motors** in AC and DC for all industrial automation, lift, and photovoltaic needs.

Gefran's know-how and experience guarantee continuity and tangible solutions.

CIVIL LIFTING

PERFORMANCE

In addition to foreseeing the market's application needs, Gefran forms partnerships with its customers to find **the best way to optimise and boost the performance of various applications.** Gefran products communicate with one another to provide integrated solutions, and can dialogue with devices by other companies thanks to compatibility with numerous fieldbuses.

SERVICES

PRE AND POST SALES

A team of Gefran experts works with the customer to select the ideal product for its application and to help install and configure devices (customercare@gefran.com).

TRAINING

Gefran offers a wide range of courses at different levels for the technical-commercial study of the Gefran product range as well as specific courses on demand.

LAT 011 is Gefran's exclusive calibration service, offered on-site and at Gefran's modern laboratories. Gefran's LAT011 lab is part of the ACCREDIA circuit, and its **certifications, inspections, tests, and calibrations are recognised throughout the world.**

GLASS

TEXTILE

ENERGY

AUTOMOTIVE

CERAMICS

INDUSTRIAL PRINTING

INDUSTRIAL PRESSURE TRANSDUCERS

For measuring fluids, liquids or gases - ideal for all industrial applications.
ATEX versions available for use in potentially explosive atmospheres.

MELT PRESSURE TRANSDUCERS

High temperature pressure transducers and transmitters are available with mercury filling, FDA-approved fluid, and fluid-free versions. Ideal for extrusion and injection applications.

LINEAR POTENTIOMETRIC TRANSDUCERS

For measuring displacement of moving mechanical parts. Sturdy and versatile, ideal for the majority of industrial applications, even under very harsh conditions.

LINEAR MAGNETOSTRICTIVE TRANSDUCERS

Created as the evolution of linear (potentiometric) displacement transmitters, Gefran magnetostrictives are designed for more complex applications, and now offer ONDA technology for simple installation, versatility, and excellent price/quality ratio.

THERMOCOUPLES AND THERMORESISTANCES

Simple and reliable temperature sensors, with a wide selection according to required application, ambient conditions, work, temperature range and precision.

LOAD CELLS AND FORCE TRANSDUCERS

For measuring the tension of plastic films and tapes, weight and measurement of compression loads and reaction force.

CONTROLLERS

A wide range of panel-mounted instruments for precise control of temperature, pressure, force, position, humidity, etc. Available in general purpose, advanced and high performance versions, with control and recording functions.

INDICATORS

Panel-mounted, configurable microprocessors to display temperature, pressure, flow rate, force, position, voltage, current, humidity, etc. With programmable alarms and diagnostics.

GEFLEX LINE

MODULAR POWER CONTROLLERS

All-in-one units for rear-panel installation that combine microprocessor controller, power actuator, current transformer and (in multifunction models) fuse and fuse holder.

SOLID-STATE RELAYS AND POWER UNITS

Solid-state actuators and relays to control resistive/inductive/infrared loads in modern temperature control systems. Complete range up to 250 A.

GCUBE FIT

COMPACT MACHINE CONTROLLER

A compact custom solution for the control and display of medium/small systems and machines.
Process control, data logging, and PLC: all in a single unit.

GCUBE MODULA

INTEGRATED MACHINE CONTROL

An integrated solution designed specifically for medium systems and machines where scalability, multi-protocol communication management, and remote access are essential characteristics.

GCUBE ADVANCED

DISTRIBUTED MACHINE CONTROL

A distributed solution with high refresh rate for use in high-performance systems and machines.
The use of Ethernet-base fieldbuses overcomes the limit of normal protocols and provides a no-compromise solution.

PROGRAMMING PLATFORM

Gefran automation platforms share a single programming tool. The use of advanced programming languages such as C++ and JAVA, and of programming environments conforming to IEC 61131-3 standards make GF_Project an open and *user-friendly* development environment.

INVERTERS

A wide range of field-oriented and sensorless vector inverters ensure high performance for general purpose and custom applications.

ACTIVE FRONT END INVERTER

Thanks to constant research, Gefran offers a wide range of inverters with AFE (Active Front End) technology for regeneration of dissipated heat.

SERVODRIVES

Precise and high-performance electronic devices to control brushless motors. Gefran servodrives integrate all typical motion control architecture technologies in a single drive.

AC, DC, REGENERATIVE CONVERTERS

A line of drives to control DC motors, designed to satisfy the needs of modern industrial systems. Integrates dedicated functions and application packets.

PV INVERTERS

A complete line of inverters for the photovoltaic sector, available in home and industrial version. Service and assistance complete the offer to the installer.

LIFT INVERTERS

A range of inverters designed for the civil lifting market. Technology and performance aimed at modern lifting systems and revamping projects.

Panel Mount "Hockey Puck" Relays and DIN Rail Mounted Solid State Relays up to 120 Amps

With forty years of experience, Gefran is the world leader in the design and production of solutions for measuring, controlling, and driving industrial production processes. Gefran's know-how and experience guarantee continuity and tangible solutions. Gefran's line of solid state relays are the ideal solution for applications where high speed switching and long life are essential. In specific applications, solid state relays offer many advantages over electromechanical devices including no moving parts or contact arcing. In addition, solid state relays are directly compatible with logic components such as microprocessors and PLCs.

leakage. This feature is important in certain medical, residential and industrial applications. The Gefran solid state relays also include built-in metal oxide varistor (MOV) protection to protect against internal damage to the solid state relay.

Output Circuit Features

The Gefran solid state relays feature zero voltage turn-on, which means they are designed to turn on at the next zero crossover after application of the control voltage. This limits electromagnetic interference, reducing the chance of damage to downstream equipment. A built-in MOV reduces the likelihood of damage to the relay from rapid changes in voltage (dv/dt) and transient voltages.

Many safety and convenience features

All Gefran solid state relays come standard with an LED to indicate when the relay is in an operational state. This increases safety and speeds troubleshooting.

In addition, all GQ hockey puck type relays come standard with a load side cover that provides touch protection. The GTS DIN-Rail mounted relays also offer touch protection through the use of a removable protective cover plate.

Common Applications

- Heating controls*
- Injection molding machines*
- Semiconductor manufacturing equipment*
- Glass processing*
- Welding controls*
- Food processing*
- Industrial & commercial ovens*
- Soldering machines*
- Medical equipment*
- Office machinery*
- Robotics*

Broad selection for many applications

The Gefran GQ solid state relays are available in single phase "hockey puck" models up to 90 amps and the GTS DIN-rail single phase units with integral heatsink up to 120 amps. The GTZ three phase models with integral heatsink up to 55 amps are also available.

Opto-isolated input limits current leakage

All Gefran solid state relays feature opto-isolated inputs where an internal LED signals a photosensitive element when output switching is to occur. This provides up to 4,000V isolation between the input voltage and the output voltage and also limits current

Integral heatsink with DIN-rail mounting

A complete selection of solid state relays are available with a built-in heatsink (GTS/GTZ models). This eliminates the hassle of selecting and installing a properly sized heatsink, or mounting to a panel mount relay directly on the back pan with silicone thermoconductive grease.

Approvals

The Series GQ and GTZ solid state relays are cURus approved and CE marked. The GTZ DIN-rail solid state relays are cULus Listed and CE marked.

- ❶ Finger Safe Protection Covers
- ❷ AC or DC Input Connections
- ❸ AC Output Connection Models
- ❹ LED Status Indicator
- ❺ Internal MOV protection
- ❻ Integrated or optional heatsinks
- ❼ cURus, CE
- ❽ cULus, CE

Catalog Number Quick Guide

Input

DC Control

Voltage Range	3 - 32V DC
Turn-on Voltage (min.)	≥ 2.7V DC
Turn-off Voltage (max.)	≤ 1V DC
Consumption	≤ 13mA @ 32V
Reverse Voltage	< 36V DC

AC Control

Voltage Range	20...260V AC/V DC
Turn-on Voltage (min.)	≥ 15V AC/V DC
Turn-off Voltage (max.)	≤ 6V AC/V DC
Consumption	≤ 8mA ac/cc @ 260V AC/V DC

Output

Nominal Voltage	24...230V AC	48...600V AC
Maximum Voltage	20...253V AC	40...660V AC
Non-repetitive Voltage	600Vp	1200Vp
Zero Switching Voltage	≤ 20V	≤ 40V
Frequency Range	45...65 Hz	45...65 Hz

Insulation

Nominal voltage	input/output	[V ac]	≥ 4000
	output/case	[V ac]	≥ 2500
Resistance	input/output	[Ω]	≥ 10 ¹⁰
	output/case	[Ω]	≥ 10 ¹⁰
Capacity	input/output	[pF]	≤ 8
	output/case	[pF]	≤ 100

Ambient Conditions

Ambient temperature	-25...+80°C [-13...176°F]
Storage temperature	-55...+100°C [-67...212°F]
Maximum relative humidity	50% at 40°C
Maximum installation altitude	2000 m above sea level
Pollution level	3

Thermal Features

Junction temperature	≤ 125°C [257°F]						
R _{th}	junction/ambient	[K/W]	≤ 12	≤ 12	≤ 12	≤ 12	≤ 12
	junction/case	[K/W]	≤ 1.25	≤ 1.25	≤ 0.65	≤ 0.30	≤ 0.65

Heatsink

$$R_{th} = (90^{\circ}\text{C} - \text{max amb. T} / P_d)$$

Where P_d = dissipated power

Max. amb. T = max. air temperature inside the electrical cabinet

Use a heatsink with thermal resistance less than the calculated R_{th} value

GTZ 3-Pole DIN-Rail Mount Relays

General Application Notes

Heatsinks

Different models of heatsinks have been designed and tested to meet size and dimension needs.

How to choose a heatsink

- Set max. air temperature inside the panelboard (T_{max_a})
- Set max. operating current: $I_{max} = I_{nom. load} + 10\%$
- Draw on the “graphs” T_{max_a} , I_{max} points.
- Choose the smallest heatsink (starting from upwards), which point [T_{max_a} , I_{max}] is in the gray working area of dissipation curves
- Respect installation distances

Installation

In order to obtain best reliability, it is important to install a heatsink correctly inside the panel, to reach an adequate thermal exchange between the device and the surrounding air in natural convection conditions.

How to install it correctly:

Mount it vertically (max. 10° inclination from the vertical axis)

- Vertical distance between a heatsink and the panel wall: 100 mm at least.
- Horizontal distance between a heatsink and the panel wall: 20 mm at least.
- Vertical distance between two heatsinks: 300 mm at least.
- Horizontal distance between two heatsinks: 40 mm at least.

Check that cable channels do not reduce these distances; should it happen, mount the relays overhanging from the panel, so that the air can flow vertically on the heatsink without obstacles (see Fig.1).

Fig. 1

G
Gefran Solid State Relays

General Application Notes (continued)

Varistors (MOV)

If your application is located near inductive loads, or shares power sources with large inductive loads that are creating transients in excess of the blocking voltage of the Gefran solid state relay, then you must install a metal oxide varistor (MOV) to protect the solid state relay. It is up to the installation company to properly size the MOV to the application! Ideally, the MOV protection is near the noise generating inductive load (such as a motor, drive, or other large inductive coil) or you can place MOVs directly across the output terminals of the SSR.

Recommended MOVs from EPCOS:

Part Number	Working Voltage (V)
S20K300	120-290 V AC
S20K420	291-400 V AC
S20K510	401-500 V AC

The Gefran solid state relays include technology that dramatically reduces your need to install an external MOV except in extremely noisy environments or inductive load applications.

Fuses and Fuse Holders

These fuses ensure the maximum safety in solid state relay applications. Fuses with a very high cutoff power are used for this kind of applications. See Table 1.

Table 1.

Recommended Fuses (by others) for GQ, GTS & GTZ Relays					
Type relay	i ² t	Nominal voltage	Size	Dimensions (mm)	Bussman Part No.
GQ 15A	450	230 480	16A	10x38	FWC16A10F

General Application Notes (continued)

Series GQ Installation notes

- The heat sink must be grounded.
- Power controllers are designed to assure a switching function that does not include protection of the load line or of devices connected to it. The customer must provide all necessary safety and protection devices in conformity to current electrical standards and regulations.
- Protect the solid state relay by using an appropriate heat sink (accessory). The heat sink must be sized according to room temperature and load current.

Dissipated Power Calculation

Single-phase relay

$P_d \text{ GQ..15/25} = 1.45 * I_{RMS} [W]$

$P_d \text{ GQ..50/90} = 1.35 * I_{RMS} [W]$

I_{RMS} = single-phase load current

Heatsink Thermal Resistance Calculation

$R_{th} = (90^\circ C - \text{max amb. } T) / P_d$

- where P_d = dissipated power
- Max. amb. T = max air temperature inside the electrical cabinet.

Use a heatsink with thermal resistance inferior to the calculated one (R_{th}).

Maximum surrounding air temperature $40^\circ C$ suitable for use in pollution degree 2 or better.

Procedure for mounting on heat sink:

The module-heat sink contact surface must have a maximum planarity error of 0.05mm. and maximum roughness of 0.02mm. The fastening holes on the heat sink must be threaded and countersunk.

Attention: spread 1 gram of thermoconductive silicone (we recommend DOW CORNING 340 HeatSink) on the dissipative metal surface of the module. The surfaces must be clean and there must be no impurities in the thermoconductive paste. As alternative it is also possible to use the graphite film SIL-GQ available as accessory.

- Alternately tighten the two fastening screws until reaching a torque of 0.4...0.6 Nm. Wait 5 minutes for any excess paste to drain.
- Alternately tighten the two fastening screws until reaching a torque of 1.2...1.4 Nm.

Installation on sink:

General Application Notes (continued)

Series GTS Installation notes

Power controllers are designed to assure a switching function that does not include protection of the load line or of devices connected to it. The customer must provide all necessary safety and protection devices in conformity to current electrical standards and regulations.

To assure maximum reliability, it is essential to install the unit correctly in the panel in order to guarantee adequate heat exchange between the heat sink and the room under natural convection conditions.

Maximum surrounding air temperature 40°C “Open Type Equipment” suitable for use in pollution degree 2 or better.

Install the unit vertically (max 10° inclination from vertical axis).

- Vertical distance between unit and panel wall >100 mm
- Horizontal distance between unit and panel wall at least 20 mm
- Vertical distance between one unit and the next at least 300 mm
- Horizontal distance between one unit and the next at least 20 mm

Make sure that the wire raceways do not reduce such distances. If they do, install the units cantilevered to the panel so that air can flow vertically onto the heat sink without obstruction.

Equipment should be short circuit protected by semiconductor fuse type:

Model	Fuse manufacturer	Fuse Model size
GTS 15/230	Bussmann Div Cooper (UK) Ltd	FWC16A10F 10x38
GTS 25/480		FWC25A10F 10x38
GTS 40/230, GTS 40/480		FWP40A14F 14x51
GTS 50/230, GTS 50/480		FWP63A22F 22x58
GTS 60/230, GTS 60/480, GTS 75/230, GTS 75/480		FWP80A22F 22x58
GTS 90/230, GTS 90/480		FWP100A22F 22x58
GTS 120/230, GTS 120/480	Bussmann Intrn'l Inc. USA	170M1418 000-TN/80

Series GTZ Installation notes

Power controllers are designed to assure a switching function that does not include protection of the load line or of devices connected to it. The customer must provide all necessary safety and protection devices in conformity to current electrical standards and regulations.

To assure maximum reliability, it is essential to install the unit correctly in the panel in order to guarantee adequate heat exchange between the heat sink and the room under natural convection conditions.

Install the unit vertically (max 10° inclination from vertical axis).

- Vertical distance between a heatsink and panel wall >100 mm
- Horizontal distance between a heatsink and panel wall at least 20 mm
- Vertical distance between two heatsink at least 300 mm
- Horizontal distance between two heatsink at least 20 mm

Make sure that the cable raceways do not reduce such distances. If they do, install the GTZ overhanging from the panel, so that the air can flow vertically on the heatsink without obstruction.

General Application Notes *(continued)*

Warnings

During continuous operation, the heat sink can reach very high temperatures, and keeps a high temperature even after the unit is turned off due to its high thermic inertia.

DO NOT work on the power section without first cutting out electrical power to the panel.

Follow the instructions in the technical manual.

Main applications

- Plastic extrusion lines and injection presses
- Packing and packaging machines
- Polymerization and production plants for synthetic fibers
- Rubber vulcanization plants
- Driers for ceramics and construction elements
- Chemical and pharmaceutical industry
- Industrial electric furnaces
- Food processing plants

Main features

- Control input from VDC/VAC logic signal
- Switching at voltage zero crossing
- LED power on indicator
- MOV protections (varistor)
- Fastening to DIN bar (standard); fastening to panel (optional)
- Option alarm output for interrupted load
- Integrated SCR thermal protection with LED signal (only for models with > 40A current)

GENERAL

Turning an electric load on or off requires the use of a suitable interrupt and protection device that is safe and immune to disturbances.

In addition, for optimum process control in many industrial applications, it is indispensable to drive the load with very short switching times: the best solution is the use of solid state relays.

Gefran proposes the GTS range of power solid state relays with voltage zero crossing, currents from 10A to 120A, and rated voltages of 230Vac, 480Vac and 600Vac.

All models are designed to guarantee operation at rated currents, with continuous driving of power at 40°C ambient temperature.

For less critical operating conditions, you can use the products beyond rated currents (using the dissipation curves as reference).

Various accessories are available, such as the attachment for panel fastening, fuses and fuse holders.

ALARM OPTION: for models with AC control (Input type = "A")

OPERATING DESCRIPTION

The alarm output option activates closing of an isolated contact when it detects the following fault conditions:

- Control signal active but no current on load (zero current, interrupted load)
- Control signal active but no power line voltage (no line)
- Control signal active but SCR / heatsink is in overtemperature (GTS thermal protection)

NOTE: in the absence of the control, the alarm output is always open (the alarm memory latch function is not possible, as with GTS with Type "D" input).

OPTION FUNCTION DESCRIPTION: for models with DC control (Input type = "D")

The Alarm Output Function activates the output switch (or PNP digital output) when detects the following situations:

- The control signal is ON, but there is not current in the Load (No Current, No Load condition)
- The control signal is ON, but there is not GTS power Line voltage supply (No Line condition)
- The control signal is ON, but the SCR / Heat sink is in over-temperature (GTS thermal protection condition)

The alarm output is latched: its status it is maintained if the Control signal is switched off, the alarm output resets when the load current is restored or when the GTS 24V_supply is switched off and on (V_supply reset).

The alarm output option is available as Insulated Solid State Switch (or as Digital Output PNP), with Normally open switch (or PNP normally non active) or normally closed switch (or PNP normally active) status.

GTS 40	112	25
GTS 50-60	112	44
GTS 75-90-120	112	113

THERMAL PROTECTION

(only on GTS models with > 40A current):

The SCR module's temperature is constantly monitored inside the device.

When the maximum temperature threshold ($T=110^{\circ}\text{C}$) is exceeded, current flow to the load is interrupted and the condition is signaled by lighting of the yellow thermal protection LED.

Isolation

Rated isolation voltage
input/output: 4000VAC rms

Ambient conditions

- **Working ambient temperature:** da 0 a 80°C (according to dissipation curves)
- **Max. relative humidity:** 50% at 40°C
- **Max. installation altitude:** 2000m asl
- **Pollution level :** 2
- **Storage temperature:** $-20..+85^{\circ}\text{C}$

Installation notes

Use the high-speed fuse specified in the catalog according to the connection example given.

- Applications with solid state power units must also include an automatic safety switch to cut out the load power line.

For maximum reliability, it is essential to install the device correctly in the panel in order to have adequate heat exchange between the sink and the surrounding air by natural convection. Install the device vertically (max. 10° inclination to vertical axis)

- Vertical distance between a device and panel wall >100mm
 - Horizontal distance between a device and panel wall: at least 20mm
 - Vertical distance between one device and another: at least 300mm.
 - Horizontal distance between one device and another: at least 20mm.
- Make sure that the cable channels do not reduce such distances; if so, install the groups cantilevered to the panel so that air can flow vertically on the heat sink without obstructions.

Limits of use

- dissipation of thermal power of device with restrictions on temperature of installation site.
- requires exchange with outside air or an air conditioner to transfer dissipated power outside the panel.
- installation restrictions (distances between devices to guarantee dissipation by natural convection)
- max. voltage limits and derivative of transients in line, for which the solid state unit has internal protection devices (depending on model).
- presence of leakage current < 3mA. (max. value with rated voltage and junction temperature of 125°C).

DIMENSIONS AND MOUNTING MEASUREMENTS

- The "ON" LED is red with the control active and yellow if the thermal protection trips.
- The "AL" LED is available only with alarm output option

DESCRIPTION OF FACEPLATE

TYPE OF OPERATION

Control from logic output in voltage

GTS thermal protection (only for models $\geq 50A$)

ALARM TYPE OF OPERATION

with VDC control (Control type "D")

GTS with VAC control (Control type "A")

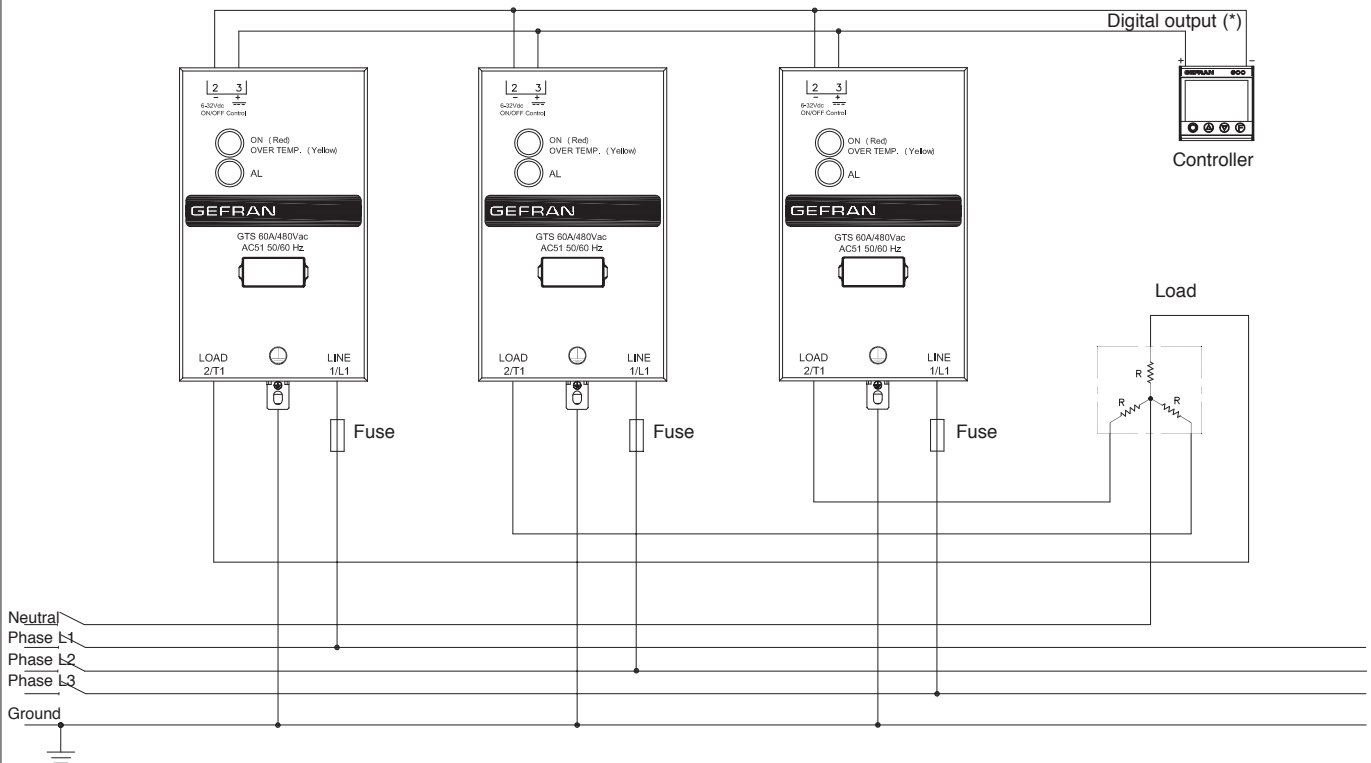

CONNECTION EXAMPLES

Single-phase connection - GTS with VDC control input (Input type "D")

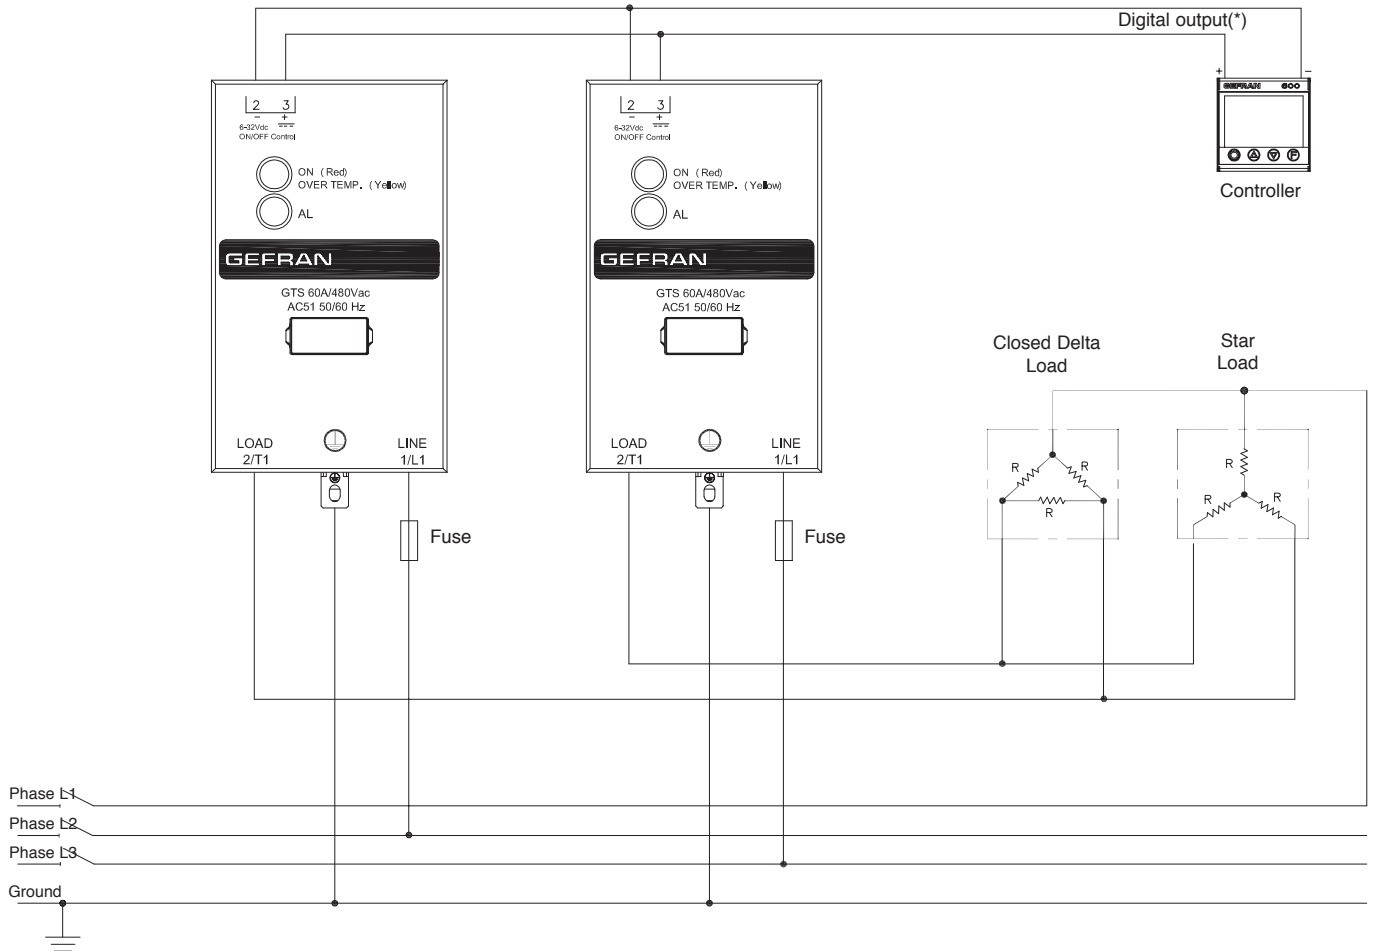

Three-phase Star connection with neutral - GTS with VDC control input (Input type "D")

(*) Or relay output with VAC output
(Use GTS with VAC control input, input type "A")

CONNECTION EXAMPLES

Three-phase Triangle or Star connection without neutral on two phases- GTS with VDC control input (Input type "D")

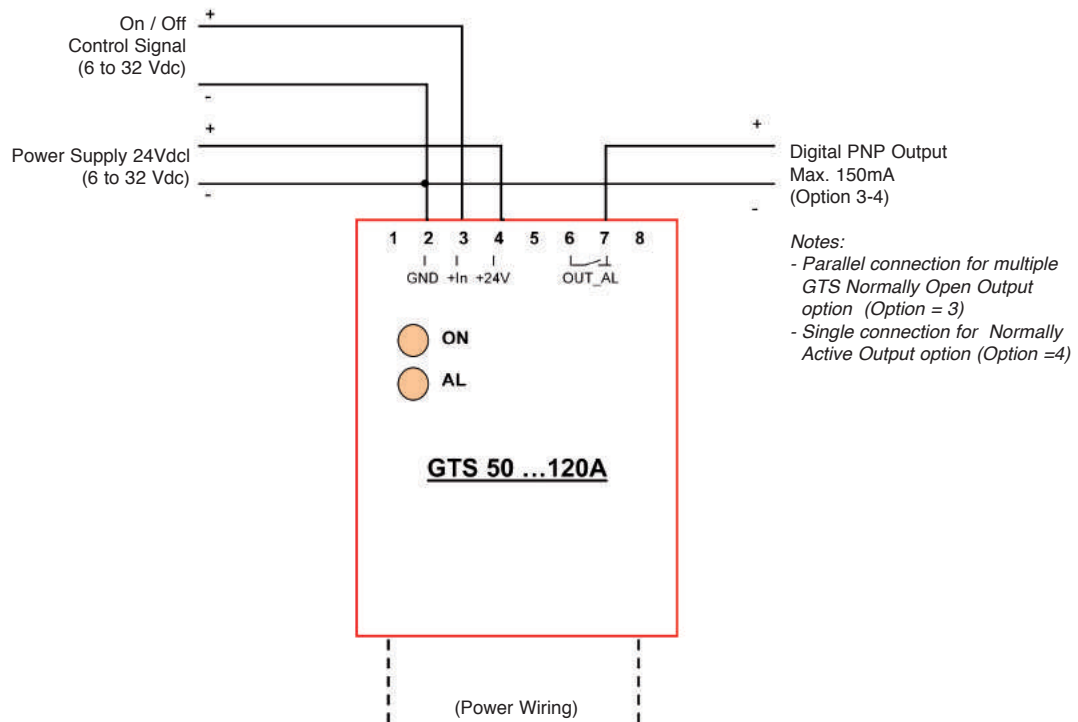

(*) Or relay output with VAC output
(Use GTS with VAC control input, input type "A")

Connection example for GTS with VDC control with isolated contact alarm output option
(only Models GTS-xx/xx-D-1 or GTS-xx/xx-D-2)

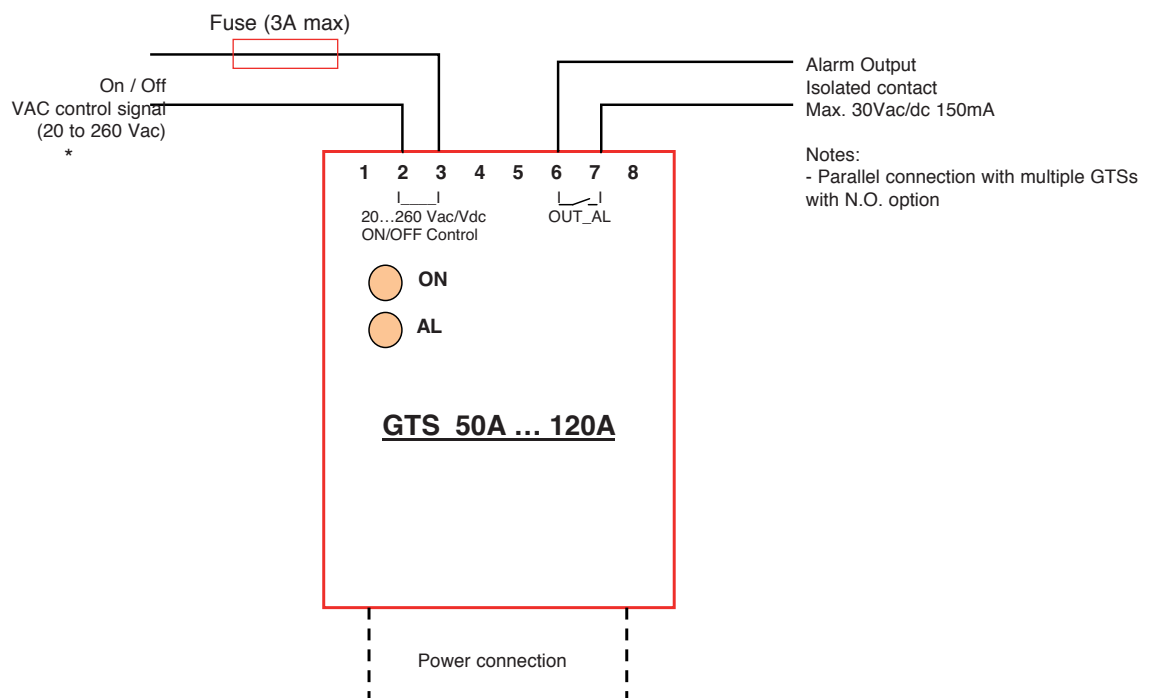

CONNECTION EXAMPLES

Connection example for GTS with VDC control with PNP alarm output option
(only Models GTS-xx/xx-D-3 or GTS-xx/xx-D-4)

Connection example for GTS with VAC control with alarm option (Option 1)
(only models GTS-xx/xx-A-1)

(*) 20...250Vac/Vdc for CSA certification

DISSIPATION CURVES

Curves of rated current according to room temperature.

GTS 15 - 25

GTS 40 - 50 - 60

GTS 75 - 90 - 120

N.B.: Curves for the GTS 120 refer to the device complete with standard running.

•WARNINGS

WARNING: this symbol indicates danger.

Read the following warnings before installing, connecting or using the device:

- follow instructions precisely when connecting the device.
- always use cables that are suitable for the voltage and current levels indicated in the technical specifications.
- In applications with risk of damage to persons, machines or materials, you **MUST** install auxiliary alarm devices. It is advisable to verify frequently that the alarm device is functional even during the normal operation of the equipment.
- **DO NOT** operate the device in rooms with dangerous (inflammable or explosive) atmosphere.
- During continuous operation, the heat sink can reach up to 100°C, and stays at a high temperature even after the device is turned off due to thermal inertia; therefore, **DO NOT** touch it and avoid contact with electrical wires.
- do not work on the power part without first disconnecting electrical power to the panel.
- do not remove the cover when the device is powered!

Installation:

- correctly ground the device using the specific terminal.
- power supply lines must be separated from device input and output lines; always check that the supply voltage matches the voltage indicated on the device label.
- avoid dust, humidity, corrosive gases and heat sources.
- respect the installation distances between one device and another (to allow for dissipation of generated heat).
- to keep air in movement, we advise you to install a fan near the GTS group in the electrical panel containing the GTSs.
- respect the indicated dissipation curves

Maintenance: at regular intervals, check operation of the cooling fans and clean all air ventilation filters.

- repairs must be done out only by trained and specialized personnel. Cut power to the device before accessing internal parts.
- do not clean the box with solvents derived from hydrocarbons (trichloroethylene, gasoline, etc.). Using such solvents will compromise the device's mechanical reliability. Use a clean cloth moistened with ethyl alcohol or water to clean external parts in plastic.

Service: GEFTRAN has a service department. The warranty excludes defects caused by any use not conforming to these instructions.

GEFRAN spa reserves the right to make aesthetic or functional changes at any time and without notice.

CSA	In Conformity with C/CSA/US CoFC no. 70051149
CE	This device conforms to European Union Directive 2004/108/CE and 2006/95/CE as amended with reference to generic standards: EN 61000-6-2 (immunity in industrial environment) EN 61000-6-4 (emission in industrial environment) - EN 61010-1 (safety regulations).
UL	In Conformity with UL508 - File: E243386

Main applications

- Plastics extrusion lines and injection moulding machines
- Polymerization plant for synthetic fibre production
- Rubber moulding machinery
- Driers for ceramics and components for the building industries
- Chemical and pharmaceutical industries
- Industrial electric ovens
- Food processing plants

Main features

- Command input from analogue voltage or current signal or potentiometer.
- Switching at voltage zero crossing.
- Partialization of wave train power with dynamically optimized time cycle.
- Antiparallel double SCR
- 2 led for supply indication, "ON" state, 1 optional LED for load interrupt alarm
- 4000V isolation between input circuit and power output
- MOV (varistor)
- Optional monitoring of interrupted load
- DIN rail mounting (standard); Panel mounting (optional)

PROFILE

The GTT family of solid-state relays has been designed with the aim of providing very accurate control of the load thanks to an analog control input, in voltage at 0...5V; 0...10V or in current at 0...20/4...20mA or a potentiometer (from 1K Ω to 10 K Ω).

The electronic design ensures that the cycle time for proportioning the power is automatically optimized.

The number of cycles that the GTT supplies to the load (wave trains) for a given input signal is calculated to be the minimum possible to maintain the necessary accuracy.

This guarantees a very fast and accurate control loop that enables the GTT, driven by a controller or a PLC with analogue output, to obtain very precise control.

The GTT can be used in three phase systems, using master-slave control architecture in which the control signal drives only one GTT (master) and this unit supplies the synchronized signals to the other GTT slaves.

Two GTS modules can also be used as slaves.

A load interrupt control option (HB) is available without having to use an external current transformer; alarm limit is settable with trimmer and yellow LED signal, with voltage-free contact, normally open.

The GTT solid-state relay has a green LED to indicate the presence of the 24Vac power supply and a red LED to indicate the switching based on the analog control input signal.

The LED signal will be continuous (off at minimum, on at maximum) at the ends of the scale, pulsing for intermediate values.

The units offer optional accessories for panel mounting, fuses and fuseholders, current transformer, isolation transformers

TECHNICAL DATA

General features

Category of use AC1
 Nominal voltage
 - 480Vac (max. range 24...530Vac)
 Nominal frequency: 50/60Hz
 Non-repetitive voltage: 1200Vp
 Zero switching voltage: $\leq 20V$
 Voltage drop at nominal current $\leq 1,4V_{rms}$
 Power factor = 1

Control inputs

Voltage: 0...5Vdc, 0...10Vdc (impedance $\geq 100K\Omega$)
 Current: 0...20mA, 4...20mA (impedance 125 Ω)
 Potentiometer: from 1K to 10K Ω (auto-fed by GTT)

OUTPUTS

GTT 25 (SCR version)

Nominal current:
 25A@40°C in continuous service
 Non-repetitive overcurrent $t=20$ ms: 400A
 I^2t for blowout $\leq 645A^2s$
 dV/dt critical with output deactivated:
 1000V/ μs

GTT 40 (SCR version)

Nominal current:

40A@40°C in continuous service

Non-repetitive overcurrent $t=20$ ms:

600A

I^2t for blowout: $\leq 1010A^2s$

dV/dt critical with output deactivated:

1000V/ μs

GTT 50 (SCR version)

Nominal current:

50A@40°C in continuous service

Non-repetitive overcurrent $t=20$ ms:

1150A

I^2t for blowout: $\leq 6600A^2s$

dV/dt critical with output deactivated:

1000V/ μs

GTT 60 (SCR version)

Nominal current:

60A@40°C in continuous service

Non-repetitive overcurrent $t=20$ ms:

1150A

I^2t for blowout: $\leq 6600A^2s$

dV/dt critical with output deactivated:

1000V/ μs

GTT 75 (SCR version)

Nominal current:

75A@40°C in continuous service

Non-repetitive overcurrent $t=20$ ms:

1300A

I^2t for blowout: $\leq 8000A^2s$

dV/dt critical with output deactivated:

1000V/ μs

GTT 90 (SCR version)

Nominal current:

90A@40°C in continuous service

Non-repetitive overcurrent $t=20$ ms:

1500A

I^2t for blowout: $\leq 11200A^2s$

dV/dt critical with output deactivated:

1000V/ μs

GTT 120 (versione SCR)

Nominal current:

120A@40°C in continuous service

(complete with fan and standard

thermostat).

Non-repetitive overcurrent $t=20$ ms:

1500A

I^2t for blowout: $\leq 11200A^2s$

dV/dt critical with output deactivated:

1000V/ μs

Isolation

Rated isolation voltage input/output:

4000Vac

Ambient conditions

- **Working temperature:**
0 to 80°C (see the dissipation curves)
- **Max. relative humidity:**
50%...40°C
- **Max. installation altitude:**
2000m asl
- **Pollution level:** 2
- **Storage temperature:**
-20...+85°C

Power supply:

24Vac $\pm 10\%$, 50/60 Hz

Absorption: 1.5VA

Max. isolation voltage: 300Vdc

Options:

Interrupted HB load alarm.

Controls the load by measuring

current on a shunt inside the device.

The alarm limit is set with a multirev monorev trimmer.

The alarm output is obtained by

means of a solid state relay. The

contact is normally open (max. 30V,

150mA, conduction resistance 15

Ohm).

Installation notes

Use the high-speed fuse specified

in the catalog according to the

connection example given.

- Applications with solid state power units must also include an automatic safety switch to cut out the load power line.

In order to obtain best reliability,

it is important to install a heatsink

correctly inside the panel, to reach

an adequate thermal exchange

between the device and the

surrounding air in natural convection conditions.

Mount it vertically (max. 10°

inclination from the vertical axis)

• Vertical distance between a device

and the panel walls >100mm

• Horizontal distance between a

device and the panel walls: at least

20mm

• Vertical distance between devices:

at least 300mm.

• Horizontal distance between

devices: at least 20 mm. Make sure

that the wire raceways do not reduce

such distances: if they do, install the

groups cantilevered to the panel so

that air can flow vertically over the

heat sink without obstructions.

Attention:

if you replace a GTT from an earlier series, note the following:

- the GTT cannot be used as a slave of a master GTT from a previous series;
- the GTT can drive a slave from a previous series only if a 10k Ω resistance is connected in series to the master/slave connection
- see the connection examples.

Limits of use

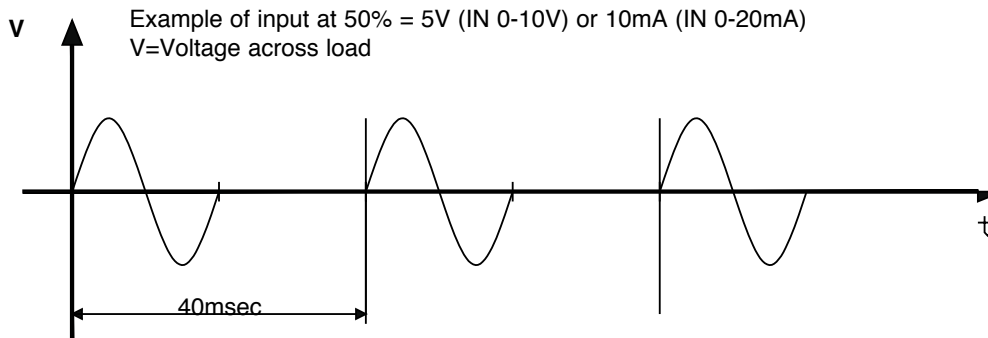

- Dissipation of thermic power on the device with restraints on the ambient temperature of the installation.
- Equip the cabinet with an external air change or air-condition it, to put out dissipated power.
- Installation restraints (distances to be respected to grant dissipation with natural convection).
- Line transistor max. voltage and derivative limits, for which the solid state relay is equipped with inside safety devices (based on the models).
- Leakage current < 3mA for SCR version GTTs.
(max. value with rated voltage and junction temperature of 125°C)

“Zero crossing” with variable cycle time

Examples of the operation of the GTT for different values of the input drive signal and the consequent different cycle times (100msec and 40msec respectively)

Logic output control for GTT

GTT thermal protection

FACEPLATE DESCRIPTION

CALIBRATION PROCEDURE OF THE INPUT SIGNAL

The solid-state power unit, GTT, is supplied factory calibrated for 0..5V, 0..10V, 0..20mA, 4..20mA inputs, 10Kohm potentiometer. Minimum and maximum values are adjusted with two monorev trimmers (d,e). Input signal type is selected with the f adjustment dip switches (S1,S2,S3).

Input signal type is selected with the f adjustment dip switches (S1,S2,S3).

Control signal	Dip Switch Position			e		V/mA In ---	f S1-S3	Rin
	S1	S2	S3					
0...5Vdc	OFF	OFF	ON			0-5V On: Off:	100K \square	
0...10Vdc	ON	OFF	ON			0-10V		100K \square
0...20mA	OFF	ON	ON			0-20mA		125 \square
4...20mA	OFF	ON	OFF			4-20mA		125 \square

Minimum adjustment trimmer (d) turned fully counterclockwise sets the start conducting limit at 4% of the signal; turned fully clockwise, the minimum conducting limit is set at 18% of the input signal.

Maximum adjustment trimmer (e) turned fully clockwise sets the full conducting limit at 96% of the signal; turned fully counterclockwise, the full conducting limit is set at 82% of the input signal

INTERRUPTED LOAD ALARM

The interrupted load alarm function enables the GTT to diagnose a variation of the load current (compared to a set limit), distinguishing it from one caused by a change in grid voltage. e. The solid state power unit must therefore be supplied with the voltage applied to the load terminals, i.e.: LOAD (L2): already connected internally;
LINE (h or i): connect terminal h for voltages from 150 to 300V; connect terminal i for voltages from 300 to 530V.
The alarm activates (relay closed and yellow alarm LED on) when the current, during the conduction of the device, falls below a preset level that may be adjusted using the trimmer on the faceplate.

Calibration procedure (refer to the faceplate description drawing)

- 1) Use the adjustment system (or a calibrator) in order to supply the maximum signal (100% conduction or the red "ON" LED always illuminated). As an alternative, you can configure the GTT to 0-10 V DC input configuration and connect terminals 5 and 6.
- 2) Use a current sensing pliers to check that the load current is at rated level.
- 3) Turn alarm limit adjustment trimmer (g) fully clockwise. Check that yellow alarm LED (b) turns on.
- 4) Slowly turn trimmer (g) counterclockwise until the alarm LED turns off.
- 5) Turn the trimmer counterclockwise another 1/10 of a turn (1 notch on the scale).
In this way, the alarm limit is set below 10% of the rated load current.

N.B:

the partial load break alarm function operates with power partialization exceeding 15%. For partializations below 20%, tripping times increase due to the reduced load activation time. For correct operation of the option, the load current has to exceed 30% of rated current for the GTT.

Notes on use of the GTT with the digital On/Off control

- The logic control signal has to be connected with the correct polarities to terminals 4 and 5 of the analog input.
- Turn minimum adjustment trimmer (d) fully counterclockwise and maximum adjustment trimmer (e) fully clockwise.
- Set the 3 dip switches (f) to off.

For applications with a very short work cycle, you can drive the solid state group by means of the Master/Slave signal by driving it with a digital signal (OFF = 0 V dc; ON = from 4 V dc to 10 V dc)

Inhibiting the GTT

You can inhibit operation of the GTT by means of the Master/Slave signal.
To inhibit, connect control signal - (4) with the synchronism signal for Master/Slave connection (3).

Notes on use of the GTT in Master/Slave configuration

The GTT can be used as a master to drive other solid state groups (slaves). With Master/Slave signal (3), you can drive up to 9 GTTs (see connection examples for GTT solid state power relays with three-phase load). You can also use a GTT to drive GTS solid state power relays (maximum of 2), as shown in the connection diagrams for GTT/GTS solid state power relays with three-phase load (attention: the HB option cannot be used for a three-phase application with neutral).

DISSIPATION CURVES

Rated current curves based on room temperature.

GTT 25 / 40

GTT 50 / 60

GTT 75 / 90 / 120

The GTT 120 curves refer to the device complete with standard fan running.

·WARNINGS

WARNING: this symbol indicates danger.

Before installation, please read the following advices:

- follow the indications of the manual scrupulously when making the connections to the instrument.
- use a cable that is suitable for the ratings of voltage and current indicated in the technical specifications.
- if the instrument is used in applications where there is risk of injury to persons and damage to machines or materials, it is essential that it is used with an auxiliary alarm device.

It is advisable to verify frequently that the alarm device is functional even during the normal operation of the equipment.

- The instrument must NOT be used in environments where there could be the presence of dangerous atmospheres (inflammable or explosive).
- During continuous operation, the heatsink may reach 100°C and remain at a high temperature due to thermal inertia even after the device is switched off. Therefore, DO NOT touch the heat sink or the electrical wires.
- do not operate on the power circuit unless the main supply is disconnected.
- DO NOT open the cover if device is "ON"!
(use the holes in the cover for eventual re-calibration).

Installation:

- connect the device to the ground using the proper ground terminal.
- the power supply wiring must be kept separate from that of inputs and outputs of the instrument; always check that the supply voltage corresponds to that indicated on the instrument cover.
- evitare la polvere, l'umidità, i gas corrosivi, le fonti di calore.
- keep away from dust, humidity, corrosive gases and heat sources.
- The connection cable must be shorter than 3 meters if the current transformer is used.

Maintenance: Check the correct operation of the cooling fans at regular intervals; clean the ventilation air filters of the installation at regular intervals.

- Repairs must be performed only by specialized or appropriately trained personnel. Cut off power to the device before accessing internal parts.
- Do not clean the box with solvents derived from hydrocarbons (trichloroethylene, gasoline, etc.). Using such solvents will compromise the mechanical reliability of the device. To clean external plastic parts, use a clean cloth wet with ethyl alcohol or water.

Technical service : GEFTRAN has a technical service department. Defects caused by use not conforming to the instructions are excluded from the warranty.

GEFRAN spa reserves the right to make any kind of design or functional modification at any moment without prior notice

This device conforms to European Union Directive 2004/108/CE and 2006/95/CE as amended with reference to generic standards: **EN 61000-6-2** (immunity in industrial environment) **EN 61000-6-4** (emission in industrial environment) - **EN 61010-1** (safety regulations).

In Conformity with **UL508 - File: E243386**

DTS_GTT_07-2015_ENG

Main applications

- Packaging Machinery
- Thermoforming
- Plastic extrusion lines
- Industrial ovens and furnaces
- Control application with high switching speed

Main features

- Alternating current solid state relay
- Zero crossing switching
- Copper/semiconductor coupling technology
- 15, 25, 50 and 90Arms nominal current
- Non-repetitive voltage: up to 1600Vp
- Nominal Voltage: up to 600 Vac
- Control voltage : 3...32Vcc and 20...260Vac/Vcc with connector
- Isolation ((input-output) 4000Vrms
- Red LED drive active signal
- Internal MOV (option)

PROFILE

Zero crossing relay with antiparallel thyristor output is the most used solid state relay in industrial applications.

In fact, it can be used for resistive, inductive and capacity loads.

"Zero crossing" relay is energised when voltage meets the zero point and disenergised when current meets the zero point, depending on the signal control on the input circuit.

This relay has been designed to stand high-value transitory applications .

When the relay has to stand high currents for a long period, it is necessary to grant a proper dissipation and an adequate electrical connection between relay terminals and the load.

Varistors, fuses, thermostats and fans are available as fittings.

Use the relay with an opportune heatsink (see section accessories).

TECHNICAL DATA

General features

Rated frequency: 45...65Hz

Activation time:

GQ...-D- ≤1/2 cycle GQ...-A- ≤1 cycle

Deactivation time:

GQ...-D- ≤1/2 cycle GQ...-A- ≤1 cycle

Power factor: ≥0,5

Protection level: IP20

• U_{imp} = 4,8KV

• U_i = 660V

• Overload current profile = 10

• Conditional short circuit current = 5KA with type 1 coordination and respective fuse protections.

Solid State Relay Dissipated Power Calculation

Single phase state relay
 P_d GQ .. 15/25 = 1,45 . Irms [W]
 P_d GQ .. 50/90 = 1,35 . Irms [W]
 P_d GQ .. 50B = 1,2 . Irms [W]
 IRMS = single-phase load current

Heatsink Thermal Resistance Calculation

$R_{th} = (90^\circ\text{C} - T_{amb. max}) / P_d$
 where P_d = dissipated power
 Max. amb. T = max air temperature inside the electrical cabinet.
 Use a heatsink with thermal resistance inferior to the calculated one (R_{th}).

DIMENSIONS

Installation notes

The device must be protected by a high speed fuse (accessory).

Applications with power solid state relays must also have a switch to isolate the power line. Protect the solid state relay against overheating by using a heatsink (accessory).

The heatsink must be sized according to room temperature and load current (see technical data).

Heatsink installation procedure:

spread 1 gram of thermoconductive silicone paste (we recommend DOW CORNING 340) on the dissipative metal surfaces of the module.

The surfaces must be clean and the thermoconductive paste must not contain any impurities.

As alternative it is also possible to use the slide SIL-GQ available as accessory.

Alternately tighten the two fastening screws until reaching a torque of 0.4...0.6 Nm.

Wait 5 minutes for any excess paste to run off.

Alternately tighten the two fastening screws until reaching a torque of 1.2...1.4 Nm.

Attention

The contact surface of the heatsink module may have a maximum planarity error of 0.1 mm and maximum roughness of 0.02 mm.

The fastening holes on the heatsink must be threaded and countersunk.

The heatsink must be grounded.

Power terminals in compliance with standard EN60947-1

•WARNINGS

WARNING: this symbol indicates danger.

Before installation, please read the following advices:

- follow the indications of the manual scrupulously when making the connections to the instrument.
- use a cable that is suitable for the ratings of voltage and current indicated in the technical specifications.
- if the instrument is used in applications where there is risk of injury to persons and damage to machines or materials, it is essential that it is used with an auxiliary alarm device.

It is advisable to verify frequently that the alarm device is functional even during the normal operation of the equipment.

- The instrument must NOT be used in environments where there could be the presence of dangerous atmospheres (inflammable or explosive).
- During continuous operation, the heatsink may reach 100°C and remain at a high temperature due to thermal inertia even after the device is switched off. Therefore, DO NOT touch the heat sink or the electrical wires.
- do not operate on the power circuit unless the main supply is disconnected.
- DO NOT open the cover if device is "ON"!

(use the holes in the cover for eventual re-calibration).

Installation:

- connect the device to the ground using the proper ground terminal.
- the power supply wiring must be kept separate from that of inputs and outputs of the instrument; always check that the supply voltage corresponds to that indicated on the instrument cover.
- evitare la polvere, l'umidità, i gas corrosivi, le fonti di calore.
- keep away from dust, humidity, corrosive gases and heat sources.
- The connection cable must be shorter than 3 meters if the current transformer is used.

Maintenance: Check the correct operation of the cooling fans at regular intervals; clean the ventilation air filters of the installation at regular intervals.

- Repairs must be performed only by specialized or appropriately trained personnel. Cut off power to the device before accessing internal parts.
- Do not clean the box with solvents derived from hydrocarbons (trichloroethylene, gasoline, etc.). Using such solvents will compromise the mechanical reliability of the device. To clean external plastic parts, use a clean cloth wet with ethyl alcohol or water.
